This document describes the precautions for using the TEC OPOS Control and the application programming method.

This document assumes that the reader is familiar with the following:

- General characteristics of POS peripheral devices
- General characteristics of TEC POS terminals and TEC POS peripheral devices
- Terminology and architecture of OLE Control and OLE Automation
- OLE for Retail POS ("OPOS") Application Programmer's Guide ("APG")
- "UnifiedPOS Specification Version 1.8"

Notes:

- All rights reserved. It is prohibited to use or duplicate a part or whole of this document without the permission of Toshiba TEC Corporation.
- This document is subject to change without prior notice.

* Microsoft, Windows, Windows NT, Windows 2000, and Windows XP are registered trademarks of Microsoft Corporation in the United States and/or other countries.

* The official name of Windows is the "Microsoft Windows Operating System".

Revision Record

No. EAA-02450

TRST-A10/TRST-A15 POS Control - Application User's Manual

Rev. No.	Date	Chapters	Description
0	Feb. 9, 2007	---	Original issue
1	Jan. 21, 2008		To support Chinese and Korean languages, the following changes were made.
		1.1.3	Code Page 949 and Code Page 54936 were added.
		1.1.7	China was added to the country code of the OPOS registry.
		1.1.7	DBCSMode was added to the OPOS registry.
		1.1.8	Notes for the use of Code Page 949 were added.
		1.1.8	Notes for the use of Code Page 54936 were added.
		4.2	The figure of the Control Panel was changed.
		4.3	The section "3.3 DBSC (Double Byte Character Set) – Setting to Print Chinese/Korean" and notes for printing Chinese and Korean were added.
		1.1.8	Note for the use of Font Size2 was added.
		4.1	Note for the installation of the general-purpose USB driver was added.
		5.1	Notes for the tool used for registering bitmaps to flash ROM were added.
2	Feb. 22, 2008	1.1.8	Setting about Using Code Page 949(Korean) was revised.
3	Apr. 6, 2009	1.1.1 1.1.8 2	Changes were made to support the Hydra function (CashDrawer).
		1.1.8	Changes were made to support FONTSIZE2.
		1.1.8	Supplementary explanation of printable digits for bar code print was added.
4	Oct. 20, 2009	1.1.1-3 1.1.7-8 2.1.1-3 2.1.6 4.1-2 5.1 6.1.2 8	Changes were made to support the LAN interface.
		8	"9. Appendix C Port Common Manager/Driver" was newly added.
5	Jan. 20, 2010		Notation of "Revision Record" were changed.(Pages -> Chapters)
		1.1.7-8	Specifications addition of "printBarcode" method. (add "Option1" to Registry setting)
		1.1.8	Notes for the behavior when I specified a TypeID out of a rule in "PTR_BCS_Code128" of printBarcode method.

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

		1.1.1 1.1.7 4.1-3	Changes were made to support TRST-A0x.
		1.1.1	Added POSReady2009 to the supported Operationg Sysytem

1. TRST-A10/TRST-A15 POS Printer

1.1 TRSTA1x POS Printer Control

1.1.1 Applicable Models and Operating Systems

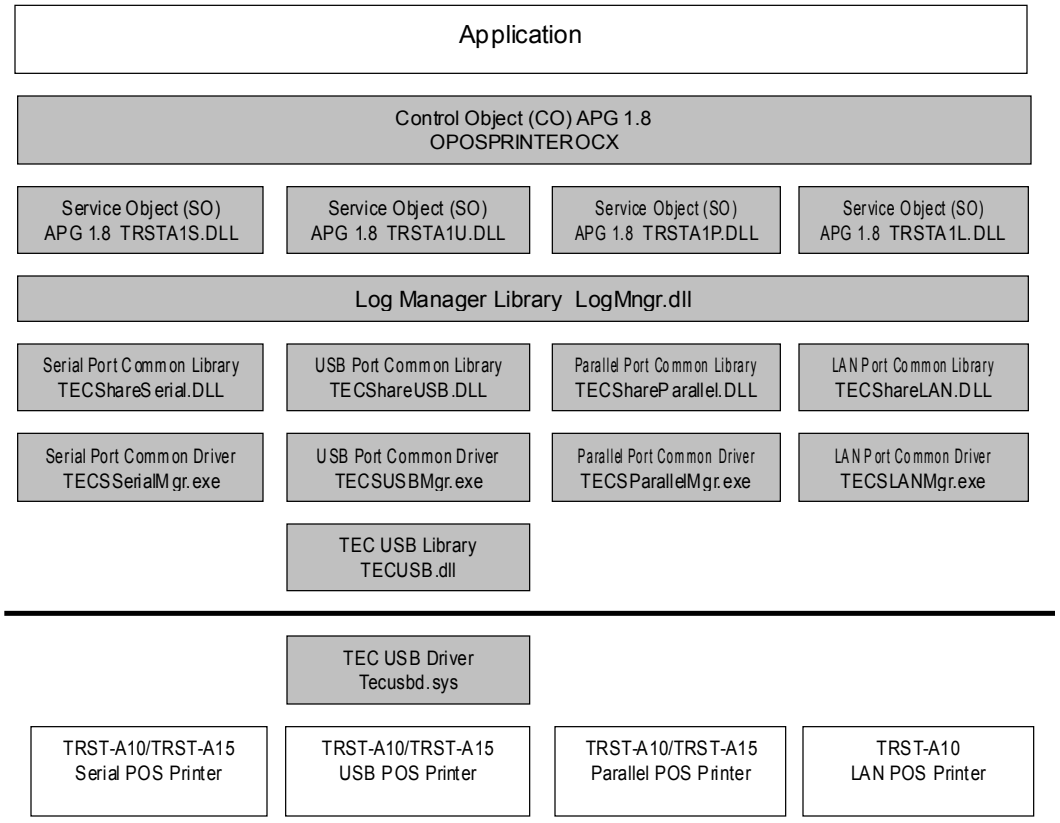
Model	Interface	Device Name (*1)
TRST-A10 Serial POS Printer (Single) TRST-A15 Serial POS Printer (Dual)	Serial	"TRSTA1S"
TRST-A10 USB POS Printer (Single) TRST-A15 USB POS Printer (Dual) TRST-A00 USB POS Printer	USB	"TRSTA1U"
TRST-A10 Parallel POS Printer (Single) TRST-A15 Parallel POS Printer (Dual)	Parallel	"TRSTA1P"
TRST-A10 LAN POS Printer (Single)	LAN	"TRSTA1Lx" (*2)
Operating System		
Windows 2000, Windows XP Professional, WEPOS, Windows Vista, Windows Embedded POSReady 2009		

(*1) Device names are used by the Open method.

(*2) The LAN interface allows a maximum of 3 printers to be connected to a single host. "x" denotes the number of printers connected (1, 2, or 3).

1.1.2 Software Structure

The software structure of this Control is as shown below.



TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

Table 1 TRSTA1x POS Printer Control – Software Structure

1.1.3 Functions

Printers supported	Printers not supported
Receipt printer	Journal printer Slip printer
Functions supported	**Functions not supported**
Synchronous/Asynchronous print Batch transaction Font type selection Bold print/Reversed character print Underline print Double width & height character print Center aligned/Right aligned Logo print Multiple line feed/Unit feed Partial paper cut Left90/Right90/180 rotation print Forward feed/180 rotation bar code print Forward feed/180 rotation bitmap print Cover open notification **(*3)** No paper notification Paper near end notification **(*3)** Two color print (red/black or blue/black) **(*1)** Red character print **(*1)** Dual side print (extended function) **(*2)** Two kinds of power status notification **(*4)**	Collection and submission of statistics Statistics reset Statistics change Simultaneous print to two kinds of printers Character set mapping Control of paper with mark Full paper cut Custom color print Color (full color) print Stamp print Shaded character print Reverse feed Cartridge status notification Cover open notification by stations Italic print Subscript/Superscript print Right90/Left90 rotation bar code print Right90/Left90 rotation bitmap print Embedded data transmission
Extended functions (DirectIO)	
Direct output to printer device Drawer control Dual side print Bitmap registration to flash ROM	
Extended functions (DirectIOEvent)	
Drawer status notification	

(*1) Red or blue is selected depending on the paper used. Color Paper should be selected in the printer configuration setting of the OPOS printer.
(*2) Supported by extending the functions which are not defined by OPOS.
(*3) Available only when "PAPER LOW SENSOR" is set to "Enable" in the printer configuration setting of the OPOS printer.
(*4) Available only for the USB POS Printer (TRSTA1U).

(*1) Changes depending on the printer's paper width. The given values are used when the printer's paper width is 80 mm and 58 mm.

(*2) Build version is indicated as "XXX" because this document may not be revised every time the module is updated.

(*3) Changes depending on the value of RecLineSpacing. The given values are used when the value of RecLineSpacing is 27. When it is 24, the printer can print up to 24 lines/18 lines.

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

(*4) Changes depending on the value of RecLineSpacing. The given values are used when the value of RecLineSpacing is 27.
(*5) The minimum value of RecLineSpacing is 24 which is equal to the value of RecLineHeight. Even when the value of RecLineSpacing is set to less than 24, it changes to 24.
(*6) CapRecNearEndSensor is always set to TRUE and available only when "PAPER LOW SENSOR" of the printer configuration setting of the OPOS printer is set to "Enable".
(*7) The value of RecSidewaysMaxChars changes depending on the font used. It is 166 for Font A and 222 for Font B.
(*8) The default value of CharacterSet changes depending on the country setting of the Control Panel. When "China" is selected, Code Page 54936 is selected, and when "Korea", Code Page 949 is selected.
(*9) Some code pages in CharacterSetList cannot be used depending on a printer model used.
(*10) Neither Code Page 949 nor Code Page 54936 supports Font B.

(*4) Changes depending on the value of RecLineSpacing. The given values are used when the value of RecLineSpacing is 27.
(*5) The minimum value of RecLineSpacing is 24 which is equal to the value of RecLineHeight. Even when the value of RecLineSpacing is set to less than 24, it changes to 24.
(*6) CapRecNearEndSensor is always set to TRUE and available only when "PAPER LOW SENSOR" of the printer configuration setting of the OPOS printer is set to "Enable".
(*7) The value of RecSidewaysMaxChars changes depending on the font used. It is 166 for Font A and 222 for Font B.
(*8) The default value of CharacterSet changes depending on the country setting of the Control Panel. When "China" is selected, Code Page 54936 is selected, and when "Korea", Code Page 949 is selected.
(*9) Some code pages in CharacterSetList cannot be used depending on a printer model used.
(*10) Neither Code Page 949 nor Code Page 54936 supports Font B.

Escape sequence operable only when specified

Name	Data	Description
Paper cut	ESC|#P	Operable The character "#" signifies the percentage cut desired. 0 : No cut 1-100 : Partial cut
Feed and Paper cut	ESC|#fP	Operable The character "#" signifies the percentage cut. 0 : No cut 1-100 : Partial cut Paper is fed by the RecLinesToPaperCut lines.
Feed & Paper cut & Stamp print	ESC|#sP	Not operable Only Feed and Paper cut are executed and Stamp Print is ignored.
Bitmap print	ESC|#B	Operable The character "#" signifies the bitmap number specified by the SetBitmap method. Bit numbers "1" to "10" can be specified. These bitmaps (bitmap numbers 1 to 10) are saved using the SetBitmap method. 1–3 : A bitmap is saved in the RAM. 4-10 : A bitmap is saved in the flash ROM. The extended function of DirectIO is used to save a bitmap in the flash ROM.
Top logo print	ESC|tL	Operable
Bottom logo print	ESC|bL	Operable
Stamp print	ESC|sL	Not operable Ignored
Multiple line feed	ESC|#lF	Operable The character "#" signifies the number of lines to be fed.
Unit feed	ESC|#uF	Operable The character "#" signifies the number of lines to be fed by MapMode units.
Reverse feed	ESC|#rF	Not operable Ignored
Embedded data transmission	ESC|#E	Not operable Ignored

Escape sequence operable during printing

Name	Data	Description
Font type selection	ESC|#fT	Operable The character "#" signifies a value that specifies a font type. 1: Font A 2: Font B

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

Escape sequence operable while printing characters

Name	Data	Description
Bold	ESC|bC	Operable
Underline	ESC|#uC	Operable The character "#" signifies the underline thickness. 0: No underline 1: Thin underline 2-: Thick underline
Italic	ESC|iC	Not operable Ignored
Custom color	ESC|#rC	Not operable Ignored
Red character	ESC|rC	Operable **(*1)**
Reversed character	ESC|rvC	Operable
Shaded character	ESC|#sC	Not operable Ignored
Single width & height character	ESC|1C	Operable
Double width character	ESC|2C	Operable
Double height character	ESC|3C	Operable
Double width & height character	ESC|4C	Operable
Horizontal scale	ESC|#hC	Operable The character "#" signifies a horizontal scale. 0 – 150: x1 151 – 250: x2 251 – 350: x3 351 – 450: x4 451 – 550: x5 551 – 650: x6 651 – 750: x7 751 - : x8
Vertical scale	ESC|#vC	Operable The character "#" signifies a vertical scale. 0 – 150: x1 151 – 250: x2 251 – 350: x3 351 – 450: x4 451 – 550: x5 551 – 650: x6 651 – 750: x7 751 - : x8
Color selection	ESC|#fC	Not operable Ignored
Center aligned Right aligned	ESC|cA ESC|rA	Operable Operable
Normal	ESC|N	Operable
Subscript	ESC|tbC	Not operable Ignored

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

Superscript	ESC|tpC	Not operable Ignored

(*1) Blue character is selected depending on the paper used.

Table 7 TRSTA1x POS Printer Control – Escape Sequence

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

1.1.4 CheckHealth Method Specifications

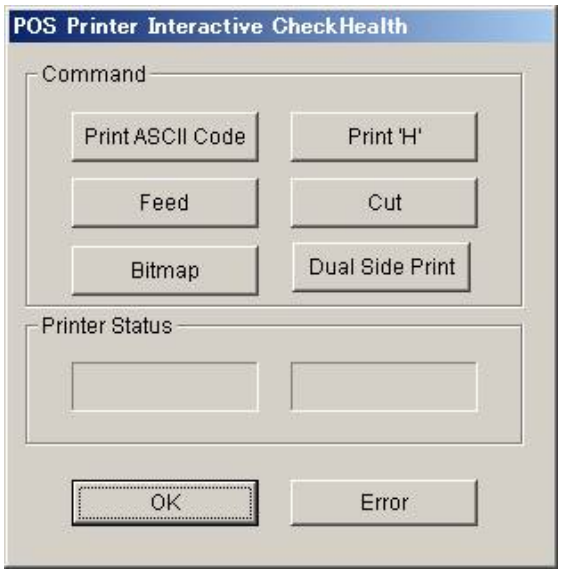
1) Internal Level (OPOS_CH_INTERNAL)
This only checks a connection status of the device.

Value (ResultCode)	CheckHealthText	Meaning
OPOS_SUCCESS	"Internal Hcheck: Successful"	Connected
OPOS_E_FAILURE	"Internal Hcheck: Error"	Not connected
OPOS_E_NOTCLAIMED	"Hcheck: Exclusive"	Exclusive error
OPOS_E_DISABLED	"Hcheck: Disabled"	Disabled

2) External Level (OPOS_CH_EXTERNAL)
This checks a device status by printing a fixed character string given below.
"TEC POS Printer OPOS CheckHealth:External"

Value (ResultCode)	CheckHealthText	Meaning
OPOS_SUCCESS	"External Hcheck: Successful"	Completed successfully
OPOS_E_FAILURE	"External Hcheck: Error"	Completed abnormally
OPOS_E_BUSY	"External Hcheck: Busy"	Device busy
OPOS_E_NOTCLAIMED	"Hcheck: Exclusive"	Exclusive error
OPOS_E_DISABLED	"Hcheck: Disabled"	Disabled

3) Interactive Level (OPOS_CH_INTERACTIVE)
This displays the following dialog box. Clicking each command button starts the corresponding operation of the POS printer and shows a printer status in the two "Printer Status" boxes.



Each command does the following:

[Print ASCII Code]:	Prints one line with alphanumeric characters.
[Print 'H']:	Prints one line with the character "H".
[Feed]:	Performs a paper feed.
[Cut]:	Performs a paper cut.
[Bitmap]:	Prints a bitmap image (192-dot height x full print width).
[Dual Side]:	Performs a dual-side print.

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

Each of the two "Printer Status" boxes shows a printer status. The right box shows a printer status in idle mode (when the printer is not in operation), and the left box shows a printer status when a command process is completed.
After visually checking the print result, press "OK" or "Error".
The dialog box shows no printer statuses in either of the right or left box while the command is being processed.

Value (ResultCode)	CheckHealthText	Meaning
OPOS_SUCCESS	"Interactive HCheck:Successful"	Completed successfully (with the OK button clicked)
OPOS_E_FAILURE	"Interactive Hcheck: Error"	Completed abnormally (with the Error button clicked)
OPOS_E_BUSY	"Interactive HCheck: Busy"	Device busy
OPOS_E_NOTCLAIMED	"HCheck: Exclusive"	Exclusive error
OPOS_E_DISABLED	"HCheck: Disabled"	Disabled

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

1.1.5 Dual Side Print (Extended Function)

The TRST-A15 printer provides the Dual Side print function.
As the OPOS printer does not provide a dual side print function for receipt, this Control provide such function by defining it using the OPOS standard methods.

Method	Description of Extended Function
TransactionPrint	Batch Transaction for Dual Side Print is made available by defining PTR_TP_TRANSACTION1, PTR_TP_TRANSACTION2, PTR_TP_TRANSACTION3, and PTR_TP_PREDEFINE to the *Control* parameter. This method starts a Batch Transaction for Dual Side Print in any of TRANSACTION1, 2, or 3 mode. PTR_TP_NORMAL processes all of PrintNormal, PrintBarcode, PrintBitmap, and RotatePrint methods, which are called after any of the transaction modes is entered. PTR_TP_PREDEFINE is used to save a fixed print pattern to be printed on the back side of paper. PTR_TP_PREDEFINE can use the PrintNormal, PrintBarcode, and RotatePrint methods, but the PrintBitmap method is not supported.
PrintNormal	In response to a request, printing on the back side of paper is made available by defining PTR_S_RECEIPT2 to the *Station* parameter. PTR_S_RECEIPT2 becomes available when the TransactionPrint method is called and the PTR_TP_TRANSACTION2 mode is entered.
PrintBarcode	In response to a request, printing on the back side of paper is made available by defining PTR_S_RECEIPT2 to the *Station* parameter. PTR_S_RECEIPT2 becomes available when the TransactionPrint method is called and the PTR_TP_TRANSACTION2 mode is entered.
PrintBitmap	In response to a request, printing on the back side of paper is made available by defining PTR_S_RECEIPT2 to the *Station* parameter. PTR_S_RECEIPT2 becomes available when the TransactionPrint method is called and the PTR_TP_TRANSACTION2 mode is entered.
ChangePrintSide	Generally, this method is effective for Dual Side Print on a slip printer. This method is also available for the TRST-A15 receipt printer.
SetLogo	This saves a top logo, bottom logo, or error logo, exclusively used for Dual Side Print by defining PTR_TP_2STL_TOP, PTR_TP_2STL_BOTTOM, and PTR_TP_2STL_ERROR_TOP to the *Location* parameter. The logo saved can be printed busing a print logo escape sequence specific to Dual Side Print.

Table 8 TRSTA1x POS Printer Control – Extended Methods for Dual Side Print

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

LONG TransactionPrint (**LONG** *Station*, **LONG** *Control*);

Parameter	Description
Station	The POS printer to be used. PTR_S_JOURNAL, PTR_S_RECEIPT, or PTR_S_SLIP.
Control	Batch transaction. Vales are as follows:

Value	Meaning
PTR_TP_TRANSACTION	Starts Batch Transaction in Single Side Print mode.
PTR_TP_TRANSACTION1	Starts Batch Transaction in Transaction1 mode where print data is automatically divided in half and each of half data is printed on the front side and back side of paper respectively.
PTR_TP_TRANSACTION2	Starts Batch Transaction in Transaction2 mode where Batch Transaction is performed on a print side specified.
PTR_TP_TRANSACTION3	Starts Batch Transaction in Transaction3 mode where Batch Transaction is performed on the back side of paper if the print data is predefined as back side print data.
PTR_TP_PREDEFINE	Enters the Back Side Print Data Predefine mode.
PTR_TP_NORMAL	Prints the buffered data and ends Batch Transaction.

Remarks This method is called to enter or exit from Batch Transaction mode. If *Control* is PTR_TP_NORMAL, Batch Transaction is performed and Batch Transaction mode is exited. If Control is PTR_TP_PREDEFINE, printing is not initiated, but data to be printed on the back side of paper in PRT_TP_TRANSATION3 mode is saved in the POS printer and Back Side Print Data Predefine mode is exited.

LONG PrintNormal (**LONG** *Station*, **BSTR** *Data*);
PrintBarCode (**LONG** *Station*, **BSTR** *Data*, **LONG** *Symbology*, **LONG** *Height*, **LONG** *Width*, **LONG** *Alignment*, **LONG** *TextPosition*);
LONG PrintBitmap (**LONG** *Station*, **BSTR** *FileName*, **LONG** *Width*, **LONG** *Alignment*);
LONG RotatePrint (**LONG** *Station*, **LONG** *Rotation*);

Parameter	Description
Station	The POS printer to be used. PTR_S_JOURNAL, PTR_S_RECEIPT, or PTR_S_SLIP. Only when the TransactionPrint method is called with the *Control* parameter set to PTR_TP_TRANSACTION2, **PTR_S_RECEIPT2** can be specified. **PTR_S_RECEIPT2** is to print on the back side of paper.

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

LONG ChangePrintSide (**LONG** *Side*);

The *Side* parameter indicates the current print side. If a *Side* value is PTR_PS_SIDE1, it means that the default print side of paper is selected.

If a *Side* value is PTR_PS_SIDE 2, it means that the opposite side of paper from the one that the POS printer defaults to after power on is selected. (The opposite side from the one selected by PTR_PS_SIDE1.)

If a *Side* value is PTR_PS_OPPOSITE, it means that the current printing side is switched and printing is performed on the opposite side of paper.

This method ends successfully even when the same side as the one currently selected is selected.

If *Side* is PRT_PS_SIDE2, printing is performed on the print side specified by PTR_S_RECEIPT2 when the TransactionPrint method is called with the *Control* parameter set to PTR_TP_TRANSACTION2, even when the *Station* parameter of the print method is PTR_S_RECEIPT.

This method is also available for normal printing when a method other than the TransactionPrint is called. (i.e. Dual Side Print specified by the POS printer configuration setting, by the registry, or by the DirectIO method.)

The *Side* value is automatically set to PTR_PS_SIDE1 after the DeviceEnabled property is set to TRUE, or right after the TransactionPrint method is called with the C*ontrol* parameter set to PTR_TP_TRANSACTION2 or to PTR_TP_NORMAL.

LONG SetLogo (LONG *Location*, **BSTR** *Data***);**

Parameter	Description
Location	The logo to be set. PTR_L_TOP or PTR_L_BOTTOM. PTR_TP_2STL_TOP(BackSide), PTR_TP_2STL_BOTTOM(FrontSide), or PTR_2STL_ERROR_TOP(Front Side) for Dual Side Print.
Data	The characters used for producing the logo.

Location	**Usable *Data***
PTR_L_TOP PTR_L_BOTTOM	Printable characters, escape sequences, carriage returns, newline/line feed
PTR_TP_2STL_TOP PTR_TP_2STL_BOTTOM PTR_TP_2STL_ERROR_TOP	Printable characters, characters of font style exclusively used for dual side printers, carriage returns, newline/line feed

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

During Dual Side Print, logos cannot be printed using the escape sequences defined by OPOS. Regarding font styles, the following font style characters, exclusively used for the dual side printers, are used (6 fixed font style characters). If an invalid value is set, an error will result. (For example, when the value, "2" or "3" is selected for Reversed Character, an error will result.

Byte	Font Style	Value		
		'0' (0x30)	'1' (0x30)	'2' (0x32)
1	Reversed character	Not effective	Reversed	Error
2	Red character	Black	Red	Error
3	Bold character	Not effective	Bold	Error
4	Double width character	Not effective	Double width	Error
5	Double height character	Not effective	Double height	Error
6	Underlined character	Not effective	1-dot underline	2-dot underline

Table 9 SetLogo Font Style Characters for Dual Side Print

Remarks PTR_L_TOP or PTR_L_BOTTOM is called to save a data string as the top or bottom logo. A logo can be printed by calling the **PrintNormal** or **PrintImmediate** method with the top log or bottom log escape sequence in the print data. RTP_TP_2STL_TOP, PTR_TP_2STL_BOTTOM, or PTR_TP_2STL_ERROR_TOP is called to save a data string as the top logo on the back side of paper or bottom logo on the front side of paper during Dual Side Print.
A logo can be printed by calling the **PrintNormal** method with the following escape sequence in the print data.

Name	Data	Description
Top logo print for dual side print	ESC|2tL	SetLogo method Prints a logo as specified by PTR_2STL_TOP(BackSide).
Bottom logo print for dual side print	ESC|2bL	SetLogo method Prints a logo as specified by PTR_2STL_BOTTOM(Front Side).
Error logo print for dual side print	ESC|etL	SetLogo method Print a logo as specified by PTR_2STL_ERROR_TOP(Front Side) to cause a print error.

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

1.1.6 DirectIO Method Specifications/DirectIOEvent Specifications

This Control supports the following extended functions using the DirectIO method.

Common for Single Side Printer / Dual Side Printer

Command	Function
TPTR_CMD_DIRECT_OUTPUT TPTR_CMD_FILE_OUTPUT	Direct output to printer device File data output
TPTR_CMD_DRAWER_OPEN	Drawer open
TPTR_CMD_DRAWER_STATUS	Acquisition of drawer status
TPTR_CMD_SETBITMAP_FLASH_START	Start of bitmap registration to flash ROM
TPTR_CMD_SETBITMAP_FLASH_END	End of bitmap registration to flash ROM

Only for Dual Side Printer

Command	Function
TPTR_2STCMD_SET_PRINTINGMODE	Print mode setting
TPTR_2STCMD_SET_PRINTINGSIDE	Print side setting
TPTR_2STCMD_SET_UPSIDEDOWN	Upside-down print setting
TPTR_2STCMD_SWAPPRINTINGSIDE	Print side switch setting
TPTR_2STCMD_PREDEFINE	Start/end of back side print data predefine

Table 10 TRSTA1x POS Printer Control – DirectIO Methods

This Control supports the following extended functions using the DirectIOEvent event.

Data	Function
TPTR_DIE_DRAWER_LOW	Drawer Close notification
TPTR_DIE_DRAWER_HIGH	Drawer Open notification

Table 11 TRSTA1x POS Printer Control – DirectIO Events

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

1) Direct Output To Printer Device

Function Directly sends a character string specified by pString to the printer device. The OPOS Control directly sends the character string without processing it. Some escape sequences, specific to the printer to which the character string is to be output, may affect the OPOS properties and performance of methods.

Format	Parameter	Description
	Command	TPTR_CMD_DIRECT_OUTPUT
	pData	Not used (Set "0" (zero).)
	pString	Specifies character string to be sent to the printer with escape sequence specific to the printer.

2) File Data Output

Function Outputs data in a specified file.
Directly sends a specified character string in a file to the printer device. The OPOS Control directly sends the character string without processing it. Some escape sequences, specific to the printer to which the character string is to be output, may affect the OPOS properties and performance of methods.

Format	Parameter	Description
	Command	TPTR_CMD_FILE_OUTPUT
	pData	Not used (Set "0" (zero).)
	pString	Specifies a name of file with full path, which stores the data to be output to the printer.

3) Drawer Open

Function Opens a cash drawer connected to the printer.
Opens a cash drawer. In Drawer Open status, the Drawer Open function ends successfully without accessing the printer device. No checks, to see whether or not the cash drawer is opened, are performed. Only a drawer open command is executed.

Format	Parameter	Description
	Command	TPTR_CMD_DRAWER_OPEN
	pData	Not used (Set "0" (zero).)
	pString	Not used (Set null ("").)

4) Acquisition of Drawer Status

Function Obtains an open/close status of a cash drawer connected to the printer.

Format	Parameter	Description
	Command	TPTR_CMD_DRAWER_STATUS
	pData	A cash drawer open/close status data is stored. 0: The cash drawer is closed. 1: The cash drawer is open.
	pString	Not used (Set null ("").)

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

5) Start of Bitmap Registration to Flash ROM

Function Requests to start Bitmap Registration to Flash ROM of the printer device. This clears all bitmap data stored in the flash ROM. By using this method and SetBitmap method, bitmaps of Bitmap No. 4 to 10 can be registered, which can be retained even after the printer power is turned off.

Format	Parameter	Description
	Command	TPTR_CMD_SETBITMAP_FLASH_START
	pData	Not used (Set "0" (zero).)
	pString	Not used (Set null ("").)

6) End of Bitmap Registration to Flash ROM

Function Requests to end Bitmap Registration to Flash ROM of the printer device. After this method is completed, bitmaps of Bitmap No. 4 to 10 cannot be registered.

Format	Parameter	Description
	Command	TPTR_CMD_SETBITMAP_FLASH_END
	pData	Not used (Set "0" (zero).)
	pString	Not used (Set null ("").)

7) Print Mode Setting

Function Sets a print mode. This function dynamically changes the print mode that can be set by the means such as print mode registry setting and printer device configuration setting.

Format	Parameter	Description
	Command	TPTR_2STCMD_SET_PRINTINGMODE
	pData	Sets a print mode to be used. 0: Single Side Print Mode This mode only prints on a front side of paper. Default setting 1: Transaction1 This mode automatically performs printing on both of the front and back sides of paper. In this mode, the print method does not immediately starts printing. Based on a Paper Cut command or a change in print mode, print lines processed by the print method are automatically divided approximately in half and former and latter half of data is printed on the front and back side of paper respectively. 2: Transaction2 This mode performs printing on the front/back side specified by the print method or by the Print Side Setting function of the DirectIO method. In this mode, the print method does not immediately starts printing. Based on a Paper Cut command or a change in print mode, print lines processed by the print method are batch processed.

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

	3: Transaction3 This mode automatically print a predefined back side print data on the back side of paper. In this mode, the print method does not immediately starts printing. Based on a Paper Cut command or a change in print mode, print lines processed by the print method are printed on the front side of paper and predefined back side data is automatically printed on the back side.
pString	Not used (Set null ("").)

8) Print Side Setting

Function Switches the print side to the opposite side from the one currently selected in Transaction2 mode. When the *Station* parameter of the print method is PTR_S_RECEIPT, this function sets the print side as specified by PTR_S_RECEIPT2.

Format	**Parameter**	**Description**
	Command	TPTR_2STCMD_SET_PRINTINGSIDE
	pData	Specifies the print side, front or back, by using the *Station* parameter, PTR_S_RECEIPT of the print method. 0: Front Printing is performed on the front side of paper. 1: Back Printing is performed on the back side of paper.
	pString	Not used (Set null ("").)

9) Upside-down Print Setting

Function Performs upside-down printing on the front and/or back side of paper in Dual Side Print mode.

Format	**Parameter**	**Description**
	Command	TPTR_2STCMD_SET_PRINTINGSIDE
	pData	0: Normal printing 1: Upside-down print only on the front side of paper 2: Upside-down print only on the back side of paper 3: Upside-down print on both sides of paper
	pString	Not used (Set null ("").)

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

10) Print Side Switch Setting

Function Selects a print head for Dual Side Print. This function specifies the print head to be used for printing on the front/back side of paper. The default setting gives a 41-mm top margin on the back side of paper. This margin is given on the font side after the print heads are switched.

Format	**Parameter**	**Description**
	Command	TPTR_2STCMD_SWAPPRINTINGSIDE
	pData	0: Default setting 1: Switch of print heads (heads for front/back side)
	pString	Not used (Set null ("").)

11) Start/End of Back Side Print Data Predefine

Function In Transaction3 mode, specifies a start or end to predefine a data as back side data. After "start" is specified, all data, set by the print method, is defined as back side data until "end" is specified. Therefore, the print method does not initiate printing once the "start" is specified.

Format	**Parameter**	**Description**
	Command	TPTR_2STCMD_PREDEFINE
	pData	0: Defined data clear 1: Start of definition 2: End of definition
	pString	Not used (Set null ("").)

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

1.1.7 OPOS Registry

TRSTA1S contains the following configuration information:

HKEY_LOCAL_MACHINE\SOFTWARE\OLEforRetail\ServiceOPOS\POSPrinter\TRSTA1S

General	"TEC.TRSTA1.S"
Service	"C:\OPOS\TEC\TRSTA1S.dll"
Description	"TEC TRSTA1 Serial POS Printer"

(*1) For Dual Side Print
(*2) Only for the LAN devices
(*3) The LAN interface allows a maximum of 3 printers to be connected to a single host. "x" denotes the number of the printers connected (1, 2, or 3). A device name is associated with an actual device on the control panel.

Table 15 TRSTA1L POS Printer Control - Registries

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

Common Registries for Single Side Printers / Dual Side Printers

Service	Filename of Service Object
Description	Brief explanation of Service Object
Version	Version number of Service Object
DeviceName	Connected device
Port (*1)	Name of communication port Can be set from the Control Panel.
BaudRate (*2)	Communication speed Can be set from the Control Panel. Should be consistent with the baud rate setting of the device.
VendorID (*3)	Vendor ID of the USB device
ProductID (*3)	Product ID of the USB device
InputInterface (*3)	Specifies an interface to be used for inputting data from a USB device
OutputInterface (*3)	Specifies an interface to be used for outputting data from a USB device
InputEndPoint (*3)	Specifies an end point to be used for inputting data from a USB device
OutputEndPoint (*3)	Specifies an end point to be used for outputting data from a USB device
IPAddress (*4)	IP address of the LAN printer used in this registry setting (IPv4 or Internet Protocol Version 4), which is represented in dot-decimal notation (four numbers, each ranging from 0 to 255, separated by dots). The IP address is not omissible. Can be set from the Control Panel.
TCPPort (*4)	Port number used in TCP/IP communication. TCPPort will default to "9100" if no value is specified or if anything other than a numeric value is specified. The value specified here must be the same as the one specified in the printer configuration.
UDPPort (*4)	Port number used in UDP/IP communication. UDPPort will default to "3000" if no value is specified or if anything other than a numeric value is specified. The value specified here must be the same as the one specified in the printer configuration.
Override	For Left90/Right90 Rotation Print, specifies whether or not standard characters are to be printed on two lines which are used for printing double height characters. Off: Not printed On: Printed Can be set from the Control Panel.
Country	Country code Can be set from the Control Panel.
PaperWidthMode	Type of paper by paper width 0: 80 mm 1: 58 mm Can be set from the Control Panel. Should be consistent with the paper width setting of the device.
FontSize	Font size setting 1: FontSize1 2: FontSize2 Can be set from the Control Panel. Should be consistent with the paper width setting of the device. (For details, refer to the section "Limitations and Precautions" in this chapter.)

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

FontType	Font type setting "1" : FontA "2" : FontB Specifies a font type to be typically used on the application. Can be set from the control panel. (For details, refer to the section "Limitations and Precautions" in this chapter.)
BitmapAspect	Bitmap aspect ratio setting 0: Not supported 1: Fixed
PrintBarCodeMode	Specifies the print mode for bar code printing. When "TEC" is specified, the print width of bar code is determined based on the ratio of width specified by the Width parameter to the paper width. When "Standard" is selected, the print width of bar code is determined by comparing the print width specified by the Width parameter to the width of bar code to be printed. (For details, refer to the section "Limitations and Precautions" in this chapter.)
WatchEndedThreadTimeout	Timeout for forced thread termination
UnKownRetryCount **(*3)**	Specifies whether or not a retry process is to be performed when a connection with the device fails due to Unknow. When this item is not contained in the registry list, no values are given, or something other than a numeric value is specified, zero (0) is selected as a default. 0: Retry process is not executed for Unknown (Default) Other than 0: Retry process is executed for UnKnown
UnKownRetryTimeout **(*3)**	Effective only when a value other than zero (0) is set for UnKnownRetryCount. To identify UnKnown from device not connected (Power OFF) for retries, a time is set in milliseconds. This module resets the device hardware to recover from UnKnown and identifies UnKnown from device not connected (Power OFF) depending on whether or not the device can be connected within a specified time of period. When this item is not contained in the registry list, no values are given, or something other than a numeric value is specified, 4000 (4 sec.) is selected as a default.
DebugLogLevel	Specifies a level for recording a log in a file specified by DebugLogFile. 0: Log is not output. 1: Level where a log is recorded mainly at a time of error 2: Level where OPOS operations can be traced using a log.
DebugLogFile	Specifies a log file with path which records OPOS operations. If a folder does not exist, no log is kept.
DBCSMode	When "Korea" is selected for Country, specifies whether or not the printer commands only used for DBCS (Double Byte Character Set) are to be used. The value should be the same as the DBCSMode setting of the printer device. 0: The commands only used for DBCS are not used. 1: The commands only used for DBCS are used. Can be set from the Control Panel.
ConnectTimeout**(*4)**	Specifies maximum waiting time in the unit of msec until a connection is established with the printer. ConnectTimeout will default to "10000" if no value is specified or if anything other than a numeric value is

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

	specified.
WriteTimeout(*4)	Specifies maximum waiting time in the unit of msec until writing into the printer is completed successfully. WriteTimeout will default to "3000" if no value is specified or if anything other than a numeric value is specified.
ReadTimeout(*4)	Specifies maximum waiting time in the unit of msec until reading from the printer is completed successfully. ReadTimeout will default to "3000" if no value is specified or if anything other than a numeric value is specified.
SendBufferSize(*4)	Specifies the size of the send buffer in bytes. As the buffer size is more extended, the application will be restricted by data transmission for a shorter period of time. However, the risk of data loss will become higher in the event of a communication failure. SendBufferSize will default to "8000" if no value is specified or if anything other than a numeric value is specified.
PrinterType	This item is used only in Control Panel. The Control Panel sets minimum setting of each printer model based on a specified value collectively. This item recommends that I set it to a used printer model. PrinterType will default to "TRST-A1x-QM" if no value is specified or if anything other than a numeric value is specified. "TRST-A1x-QM" "TRST-A1x-CN" "TRST-A0x" Registry is changed automatically as follows by setting this item in Control Panel.

PrinterType	FontSize	ProductID(*5)
TRST-A1x-QM	Not change	61
TRST-A1x-CN	Not change	70
TRST-A0x	FontSize2	82

(*1) Used by the TRSTA1S/TRSTA1P
(*2) Used by the TRSTA1S
(*3) Used by the TRSTA1U
(*4) Used by the TRSTA1L
(*5) The ProductID setting is performed only at the time of setting of the USB.

Table 16 TRSTA1x POS Printer Control – Common Registries for Single/Dual Printers

Registries Specific to Dual Side Printers

2STPrintingMode (*1)	Print mode 0: Single Side Print mode (Default) 1: Transaction1 2: Transaction2 3: Transaction3 Can be set from the Control Panel.
2STUpsideDown (*2)	Upside-down Print on the front/back side of paper for Dual Side Print 0: Normal printing 1: Upside-down print only on the front side of paper 2: Upside-down print only on the back side of paper

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

	3: Upside-down print on both sides of paper Can be set from the Control Panel.
2STSwapFrontBackSide **(*3)**	Switches the print side to print on the front/back side of paper by specifying a print head. FALSE: Default TRUE: Print side is switched. Can be set from the Control Panel.
2STMinRecLength	Minimum number of dots to be printed on the front side in Transaction1 mode. (in units of 1/203 inch) Can be set from the Control Panel.

(*1) For details, refer to print mode setting of DirectIO method.
(*2) For details, refer to upside-down print setting of DirectIO method.
(*3) For details, refer to print side switch setting of DirectIO method.

Table 17 TRSTA1x POS Printer Control – Registries for Dual Side Printers

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

1.1.8 Limitations and Precautions

1) Font size and font type

For this device, font specifications are determined under the concept of font size and font type. Font sizes are FontSize1 and FontSize2 and font types are FontA and FontB. The font specifications are as follows.

Font Size	Font Type	Font Size of 1-byte Character (width x height)	Default Line Spacing
FontSize1	FontA	12 x 24[dot]	27[dot]
	FontB	9 x 24[dot]	
FontSize2	FontA	13 x 28[dot]	34[dot]
	FontB	10 x 28[dot]	

Table 18 TRST-A1x POSPrinter OPOS - Font Specifications

This device can use 80-mm wide and 58-mm wide papers and depending on the paper being used, the number of printable characters per line varies. The value of **RecLineChars, RecLineCharsList, RecSidewaysMaxLines**, and **RecSidewaysMaxChars** properties is determined based on a paper width in addition to the above-mentioned font size and font type. The table below gives the values of each property.

Font Size	Paper Width	Font Type	RecLine Chars Property	RecLine CharsList Property	RecSideways MaxLines Property	RecSideways MaxChars Property
FontSize1	80mm	FontA	48	"48,64"	21	166
		FontB	64		21	222
	58mm	FontA	36	"36,48"	16	166
		FontB	48		16	222
FontSize2	80mm	FontA	42	"42,56"	16	153
		FontB	56		16	200
	58mm	FontA	32	"32,42"	12	153
		FontB	42		12	200

Table 19 TRST-A1x POSPrinter OPOS – Paper-width-dependent Properties

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

Because the value of **RecLineHeight**, **RecLineSpacing**, and **RecLineWidth** properties should be set in the unit specified by the **MapMode** property, the value of these properties is determined based on the **MapMode** property value as well as the above-mentioned font size, font type, and paper width. The table below gives the values of each property.

MapMode Property	Font Size	Paper Width	Font Type	RecLine Height Property	RecLine Spacing Property	RecLine Width Property
PTR_MM_ DOTS (Dot width)	FontSize1	80mm	FontA	24	27	576
			FontB			576
		58mm	FontA			432
			FontB			432
	FontSize2	80mm	FontA	28	34	546
			FontB			560
		58mm	FontA			416
			FontB			420
PTR_MM_ TWIPS (1/1440 of 1 inch)	FontSize1	80mm	FontA	170	191	4082
			FontB			4082
		58mm	FontA			3061
			FontB			3061
	FontSize2	80mm	FontA	198	240	3869
			FontB			3968
		58mm	FontA			2948
			FontB			2976

			FontB			7000
		58mm	FontA			5200
			FontB			5250

Table 20 TRST-A1x POSPrinter OPOS – MapMode-dependent Properties

2) Writable property that can change font
A font changes in accordance with the change of a RecLineChars value.
The RecLineChars value is changed to the value larger than and as close as a specified value, and accordingly the font is changed.

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

3) Bar code print

This POS printer can print the following bar codes:

Barcode Type	Number of digits	Available Characters
UPC-A	11,12	Numeric characters 0 to 9
UPC-E	11,12	Numeric characters 0 to 9
JAN8(EAN8)	7,8	Numeric characters 0 to 9
JAN13(EAN13) ITF	12,13 Variable length(*1) Even digits	Numeric characters 0 to 9 Numeric characters 0 to 9
Codabar(NW7)	Variable length(*1)	Numeric characters 0 to 9, "A" to "D", "$", "+", "-", ".", "/"
Code 39	Variable length(*1)	Numeric characters 0 to 9, uppercase alphabet characters A to Z, space (" "), "$", "%", "*", "+", "-", ".", "/"
Code 93	Variable length(*1)	0 – 127
Code 128	Variable length(*1)	Start code: 103 – 105 Data TypeA: 0 – 95 TypeB: 32 – 127 TypeC: "0" – "9"
PDF417	Variable length(*1)	0 – 255

Table 21 TRSTA1x POS Printer Control – Printable Bar Codes

*1: The number of printable digits varies depending on paper width, existence of text, and font used for text.
When there is any text, the OPOS method completes successfully, but bar code is not printed, if print width for the text is larger than paper width.

For some bar code types, care must be taken when setting bar code data to the *Data* parameter of the PrintBarcode method.
Such bar code types and precautions are given in the table below:

Barcode Type	Precautions
Codabar(NW7)	Start code, "A", "B", "C", or "D" and stop code, "A", "B", "C", or "D" should be affixed. Even when neither of start code nor stop code is affixed, the OPOS method completes successfully, but bar code is not printed.
Code 39	If neither of start code "*" nor stop code "*" is affixed, the POS printer automatically affixes a start code and a stop code to print bar code.
Code 128	A start code, {A, {B, or {C should be affixed. When a start code is not affixed, the OPOS method performed as {A.
Code 128 with parsed	A start code, {A, {B, or {C should be affixed. Even when a start code is not affixed, the return value of OPOS method becomes OPOS_E_ILLEGAL.

Table 22 TRSTA1x POS Printer Control – Precautions for Setting Data Parameter

When a PrintBarCodeMode registry value is "Standard", bar code printing is performed in accordance with the specifications described in the APG.
By comparing the width specified by the Width parameter of the PrintBarCode method to that of the bar code to be printed, the bar code width is selected among the six levels of width, which is as close as the

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

width of bar code to be printed and less than that specified by the Width parameter.
The module width changes depending on barcode type and width, and data as shown below. If all bar code digits cannot be printed on the printer, an error will result by the PrintBarCode method.

Barcode Type	Barcode Width (dots)	Module Width (dots)
UPC-A	95	1
	190	2
	285	3
	380	4
	475	5
	570	6
UPC-E	51 102	1 2
	153	3

	33 x number of digits in Code Set C + 66 x number of characters in code sets other than Code Set C + 210 When counting the number of digits in Code Set C, one character equals to 2 digits.	6
PDF417	Less than 1/6 of paper width	1
	1/6 or more, but less than 2/6 of paper width	2
	2/6 or more, but less than 3/6 of paper width	3
	3/6 or more, but less than 4/6 of paper width	4
	4/6 or more, but less than 5/6 of paper width	5
	5/6 or more, but less than paper width	6

Table 23 TRSTA1x POS Printer Control – Width of Bar Code to be Printed

When a PrintBarCodeMode registry value is "TEC", the module width of bar code data is determined based on the *Width* parameter value of the PrintBarCode method. The narrower the module width is, the more numbers of the bar code digits can be printed. For the 58-mm and 80-mm wide paper, module width is as shown in the table below. This mode is supported for this Control to have compatibility with the Toshiba TEC's existing OPOS Control.

PrintBarcode Width Parameter	Module Width (dots)
Less than 1/2 of paper width	2
1/2 or more, but less than 3/4 paper width	3
3/4 or more, but less than paper width	4

Table 24 TRSTA1x POS Printer Control –
Width of Bar Code Printed in TEC Mode (58 mm paper wide)

PrintBarcode Width Parameter	Module Width (dots)
Less than 1/2 of paper width	2
1/2 more, but less than 3/4 paper width	4
3/4 or more, but less than paper width	6

Table 25 TRSTA1x POS Printer Control –
Width of Bar Code Printed in TEC Mode (80 mm paper wide)

When a PrintBarCodeMode registry value is "Option1", the bar code module width is determined depending on the values input into the **printBarCode** method's symbology parameter and data parameter. For the bar code size to be actually printed, please refer to "Table 26 TRSTA1x POS Printer Control – Width of Bar Code Printed in Option1 Mode".

For example, when Code93 bar code is to be printed by 28 digits, the bar code is printed with bar code module width 1.

The following table gives module width for each bar code to be printed.

Bar Code Symbology	Module Width (dots) Specification.						Remarks
	1	2	3	4	5	6	
UPC-A	Not use	Printing	Not use	Not use	Not use	Not use	
UPC-E	Not use	Printing	Not use	Not use	Not use	Not use	
EAN-13	Not use	Printing	Not use	Not use	Not use	Not use	
EAN-8	Not use	Printing	Not use	Not use	Not use	Not use	

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

Code 39	21–42 digits	1–20 digits	Not use	Not use	Not use	Not use	
ITF	41-48 digits	1–40 digits	Not use	Not use	Not use	Not use	
Codabar (NW-7)	29-42 digits	1–28 digits	Not use	Not use	Not use	Not use	Including START/STOP codes
Code 93	28-44 digits	1–27 digits	Not use	Not use	Not use	Not use	
Code 128	24-48 digits	1–23 digits	Not use	Not use	Not use	Not use	
PDF417	Not use	Not use	Not use	Printing	Not use	Not use	

Table 26 TRSTA1x POS Printer Control – Width of Bar Code Printed in Option1 Mode

4) Bitmap print

- Bitmap files processed by the SetBitmap and PrintBitmap methods are printed only in black and white.
- Bitmaps are registered in the printer by the SetBitmap method and printed by the Bitmap Print escape sequence (ESC|#B). A bitmap set by a process is shared by all processes opened.
- Using SetBitmap, bitmaps can be registered in the RAM or flash ROM of the POS printer: in the RAM for Bitmap Nos. 1 to 3, and in the flash ROM for Bitmap Nos. 4 to 10. To register a bitmap in the flash ROM, a Start of Bitmap Registration to Flash ROM request and an End of Bitmap Registration to Flash ROM request of the DirectIO method should be called. All bitmaps saved in the RAM will disappear when the printer power is turned off, but those saved in the flash ROM will be retained even after the printer power is turned off.
- All bitmaps saved in the flash ROM will disappear, when the printer firmware setting such as FontSize is changed. That is why, as for this case, all bitmaps should be re-defined again.
- All bitmaps should be collectively saved in the flash ROM. When a bitmap is re-defined, all bitmaps should be re-defined again because they are deleted. It is recommended to use a tool to write bitmaps into the flash ROM which is provided together with the POS printer Control.
- SetBitmap limits the size of a bitmap to be saved in the flash ROM. The maximum width and height are as follows: Bitmaps can be clearly printed if the width and height are multiples of 8 dots.

In the case of FontSize1

	Width (Max.)	Height (Max.)
80-mm wide paper	576(72*8)	512(64*8)
58-mm wide paper	432 (54*8)	512 (64*8)

In the case of FontSize2

	Width (Max.)	Height (Max.)
80-mm wide paper	512(64*8)	512(64*8)
58-mm wide paper	360(45*8)	512 (64*8)

In the case of FontSize2, the application should consider that bitmap image is printed after the font width is multiplied by 1.17 due to firmware specifications. For example, for the 512-dot wide bitmap, font width is 512 x 1.17 ≠ 597[Dots].

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

**Table 27 TRSTA1x POS Printer Control –
Max. Size of Bitmap Which Can be Saved Using SetBitmap**

5) Notes for escape sequence
Operations, when an escape sequence is not specified at the head of line, but specified in the middle of character string, are as follows:

For example
When an escape sequence is specified after printing and without performing carriage returns as in the case with PrintNormal (Station, "111"):

Escape Sequence	Operation when Escape Sequence is not Specified at the Head of Line
Paper cut	Automatically performs carriage returns and cut a paper after printing a print data.
Barcode print	Automatically performs carriage returns and prints bar code data after printing a print data.
Bitmap print	Automatically performs carriage returns and prints bitmap data after printing a print data.
Center aligned	Whole line is center aligned including the character before an escape sequence. The last Center Aligned or Right Aligned escape sequence specified is effective.
Right aligned	Whole line is right aligned including the character before an escape sequence. The last Center Aligned or Right Aligned escape sequence specified is effective.

Table 28 TRSTA1x POS Printer Control – Notes for Escape Sequence

6) Unidirectional print and bi-directional print
This printer only supports unidirectional print.
Therefore, RecLetterQuality is always set to TRUE.

7) Difference in character set by countries and registry
This printer defines different characters for each country.
The Country registry specifies a character set for each country. Characters used only for certain countries and graphic characters for business use are assigned to the 12 characters: 0x23, 0x24, 0x40, 0x5B to 0x5E, 0x60, 0x7B to 0x7E.
This character set function is independent from the character setting by the CharacterSet property.

8) Timing of reporting the end of print method
This Control does not report the completion of printing when printing on a paper is completed, but reports when transmission of print data to the printer is completed. For this reason, a timing of such report may not be consistent with that when the printing is completed. Especially please note this when the amount of remaining printable area becomes low. There may be the cases that No Paper will occur after the application finishes sending all print data. It is recommended to replace a paper when a red mark, that indicates the amount of remaining printable area is low, appears. Or, it is recommended that the application can resume printing when the POS printer performed an abnormal printing.

9) Operation at a time of TransactionPrint Method error
This Control resumes printing from the beginning of a print transaction when an error occurs during an asynchronous print initiated by the TransactonPrint method and the application sets a value of pErrorResponse from the ErrorEvent handler to OPOS_ER_RETRY. A receipt can be output properly by manually cutting a paper before a retry is performed by the ErrorEvent handler. If printing is performed in

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

synchronization mode, printing cannot be retried through this control. Therefore, a retry must be performed starting with registration of the transaction data. The same procedure must be used in the event of an occurrence of an error while the transaction data is being accumulated.

10) Notes for using the ClearOutput method

When printing is terminated by the ClearOutput method, printing may stop before all data for the line being printed is printed. It is recommended to output a feed escape sequence or LineFeed(10) when there is a need to stop printing by ClearOutput. Also, it is preferable that a line feed value of RecLineSpacing is reset to the default (27 dots) just in case the value has been changed to 24. It would be better to implement these solutions also for error recovery processes.

11) Paper cut

This printer only supports Partial Paper Cut due to its mechanical structure. When Paper Cut is performed by the CutPaper method or the escape sequence, Partial Cut is performed regardless of the percentage specified. Please note the method does not cause an error.

12) Power status notification

None of the following printers supports the power status notification function: TRSTA1S (Serial POS Printer), TRSTA1P (Parallel POS Printer), and TRSTA1L (LAN POSPrinter).

TRSTA1U (USB POS Printer) supports this function in accordance with the specifications described in the OPOS's APG.

TRSTA1U monitors and issues the two kinds of power status notifications: "Online" and "OFF or Offline".

When the Claim (ClaimDevice) method is executed, a power-off status is not issued or an error is not caused due to a disconnection of USB cable. However, OPOS_E_ILLEGAL error will result when a power-off status is returned or a USB cable is disconnected if DeviceEnabled property is set to TRUE.

13) Process at power recovery

When the power is turned off and on again, the TRSTA1U (USB POS Printer) tries to restore the status just before the power was shut off.

This Control initializes the device based on the current property value, but does not reset the user settings such as direct output of printer escape sequence using the DirectIO method which includes time-consuming processes such as registration of bitmap and writable characters using the SetBitmap method. For such user settings, the user should monitor the power status and perform an initialization.

14) Cover status notification for each station

This device has only one cover. Therefore, PTR_SUE_REC_COVER_ OPEN and PTR_SUE_ REC_COVER_OK events are not issued. Only the PTR_SUE_COVER_OPEN and PTR_SUE_ COVER_OK events are issued as a cover open status as in a conventional way

15) Left90/Right90 rotation print

- This Control supports neither of Left90/Right90 Rotation Bitmap print (PrintBitmap method) nor Left90/Right90 Rotation Barcode print (PrintBarcode method). Even though Bitmap Print escape sequence (ESC|#B) can be used with Left90/Right90 Rotation Print, a line feed is automatically performed and bitmap is printed as described in "Notes for escape sequence" above.
- This Control supports both Left90 and Right 90 Rotation Print, but there are limitations for escape sequences.

Escape sequence not operable (ignored)
• Embedded data transmission • Subscript print • Superscript print • Italic print • Custom color print

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

• Shaded character print • Paper cut • Reverse feed • Font type selection • Stamp print
Escape sequence whose operation is not guaranteed
• Feed and Paper cut • Feed and Paper cut and Stamp cut
Available escape sequence
• Bitmap print • Single width & height character print • Double width print • Double height print • Double width & height character print • Horizontal scale • Vertical scale • Color selection • Center aligned • Right aligned • Normal print • Bold print • Underline print • Red character print • Reversed character print • Multiple line feed • Unit feed • Top logo print • Bottom logo print

**Table 29 TRSTA1x POS Printer Control –
Print Escape Sequence for Left/Right Rotation**

16) Dual side print

- For printing on the back side of paper in Dual Side Print mode, a 41-mm top margin is always provided.
- The RotatePrint method is not available in PTR_TP_TRANSACTION1 mode (Transaction1 mode) of the TransactionPrint.method. If the RotatePrint method is called, an OPOS_E_ILLEGAL error will result.
- In PTR_TP_TRANSACTION1 mode (Transaction1 mode) of the TransactionPrint method, printing is always performed on the front side of paper by the approximate number of lines specified by the RecLinesToPaperCut property ("RecLinesToPaperCut lines") from the last line. Data of the last RecLinesToPaperCut lines should be printed as a logo data for a next receipt, or a paper should be fed by the RecLinesToPaperCut lines.
- When the ChangePrintSide method is called while the RotatePrint method is being executed in PTR_TP_TRANSACTION2 mode (Transaction2 mode) of the TransactionPrint method, an OPOS_E_ILLEGAL error will result.

(Example: Abnormal)

```
TransactionPrint(PTR_TP_TRANSACTION2)
RotatePrint(PTR_RP_RIGHT90)
PrintNormal(PTR_S_RECEIPT)
PrintNormal(PTR_S_RECEIPT)
ChangePrintSide(PTR_PS_SIDE2)
PrintNormal(PTR_S_RECEIPT)
```

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

PrintNormal(PTR_S_RECEIPT)
PrintNormal(PTR_S_RECEIPT)
RotatePrint((PTR_TP_NORMAL)
TransactionPrint(PTR_TP_NORMAL)

- In PTR_TP_TRANSACTION2 mode (Transaction2 mode) of the TransactionPrint method, select only one *Station* parameter of the PrintNormal method to execute a Left90/Right90 Rotation Print using the RotatePrint method.

(Example: Abnormal)

- TransactionPrint(PTR_TP_TRANSACTION2)
RotatePrint(PTR_S_RECEIPT ,PTR_RP_RIGHT90)
PrintNormal(PTR_S_RECEIPT)
PrintNormal(PTR_S_RECEIPT2)
PrintNormal(PTR_S_RECEIPT)
PrintNormal(PTR_S_RECEIPT2)
PrintNormal(PTR_S_RECEIPT)
RotatePrint(PTR_S_RECEIPT ,PTR_TP_NORMAL)
TransactionPrint(PTR_TP_NORMAL)

(Example: Normal)
TransactionPrint(PTR_TP_TRANSACTION2)
RotatePrint(PTR_S_RECEIPT ,PTR_RP_RIGHT90)
PrintNormal(PTR_S_RECEIPT)
PrintNormal(PTR_S_RECEIPT)
PrintNormal(PTR_S_RECEIPT)
RotatePrint(PTR_S_RECEIPT ,PTR_TP_NORMAL)
RotatePrint(PTR_S_RECEIPT 2,PTR_RP_RIGHT90)
PrintNormal(PTR_S_RECEIPT2)
PrintNormal(PTR_S_RECEIPT2)
RotatePrint(PTR_S_RECEIPT2 ,PTR_TP_NORMAL)
TransactionPrint(PTR_TP_NORMAL)

- In PTR_TP_TRANSACTION2 mode (Transaction2 mode) and PTR_TP_TRANSACTION3 mode (Transaction3 mode) of the TransactionPrint method, printing is performed using a longer side of paper as a reference. When the number of lines to be printed on the front side is more than that on the back side, feeding a paper by the RecLinesToPaperCut lines will move the last line to the cut position, but if the number of lines to be printed on the back side is more than that on the front side, the paper should be fed by more lines than the RecLinesToPaperCut lines.
- In PTR_TP_TRANSACTION2 mode (Transaction2 mode) and PTR_TP_TRANSACTION3 mode (Transaction3 mode) of the TransactionPrint method, printing is not performed if data amount to be printing on the front side is less than the RecLinesToPaperCut lines and there is no print data to be printed on the back side.
- In PTR_TP_PREDEFINE mode (Back Side Data Predefine mode) of the TransactionPrint method, an error will result if the PrintBitmap method is called.

- Available methods for the TransactionPrint method in Dual Side Print mode are as follows: Generally, all methods that can be used by the TransactionPrint method described in the OPOS's APG are available. There are limitations in the PrintBitmap method and RotatePrint method. In accordance with the OPOS's APG, the ChangePrintSide method cannot be used by the TransactionPrint method, but this Control allows it to be used in some modes.

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

	TRANSACTION1	TRANSACTION2	TRANSACTION3	PREDEFINE
PrintNormal	Available	Available	Available	Available
PrintBitmap	Available	Available	Available	Not available
PrintBarcode	Available	Available	Available	Available
RotatePrint	Not available	Available	Available	Available
ChangePrintSide	Not available	Available	Not available	Not available

Table 26 TRSTA1x POS Printer Control – Available Methods for Dual Side Print

17) Code Page 949 (Korea)

The TRST-A1x-xx-QM-R supports Code Page 949. Although Code Page 54936 is shown in the CodePageList property, it is not supported by the TRST-A1x-xx-QM-R.

In addition, although FontA and FontB are shown in the FontTypefaceList property, Code Page 949 does not support FontB.

To use Code Page 949, necessary settings should be made to the printer configuration and the Control Panel of the OPOS. For details of the settings, please refer to "3.3 DBSC (Double Byte Character Set) – Setting to Print Chinese/Korean". The default value of the CodePage property is "949". When the application selects a code page other than "949" from the code pages except for "54936", a printer operation would be as follows depending on the printer configuration setting.

Setting where a code page change does not take effect:

Printer Configuration	Printer Configuration Value	OPOS Country	OPOS DBCS Mode
Software Options Set DBCS & Font Size	DBCS:INVALID/Font:Size1	Korea	0 (without check)
Software Options SET Printer Mode ANK to DBCS?	VALID		

Setting where a code page change takes effect:

Printer Configuration	Printer Configuration Value	OPOS Country	OPOS DBCS Mode
Software Options Set DBCS & Font Size	DBCS:INVALID/Font:Size1	Korea	1 (with check)
Software Options SET Printer Mode ANK to DBCS?	VALID		

18) Code Page 54936 (Chinese)

The TRST-A1x-xx-CN-R supports Code Page 54936. Although Code Page 949 is shown in the CodePageList property, it is not supported by the TRST-A1x-xx-CN-R.

In addition, although FontA and FontB are shown in the FontTypefaceList property, Code Page 54936 does not support FontB.

To use Code Page 54936, necessary settings should be made to the OPOS Control Panel. For details of the settings, please refer to "3.3 DBSC (Double Byte Character Set) – Setting to Print Chinese/Korean". The default value of the CodePage property is "54936". When the application selects a code page other than "54936" from the code pages except for "949", the code page should be changed.

19) Hydra function

Both this Control and the TRSTA1x CashDrawer Control use the TRST-A10 and TRST-A15 printer devices and the same port (COM port, LPT port, or USB port). Using the Hydra function, two or more OPOS controls can use the same port, but the same port cannot be controlled at an exact timing by two or more OPOS controls. For this reason, a drawer control cannot be performed during printing or printing cannot be performed at the moment when the drawer control is being performed. Especially because it takes time to print or register bitmaps on the printer, the application should control processes

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

in a manner so that printing or registration of bitmap and drawer control will not occur at the same time, avoiding the drawer control from waiting to be performed.

20) Error while printing is being performed

If the connection goes down for a long period of time (It changes by quantity and the transmission of a message interval of transmission of a message data, but the aim is around 10 seconds) while printing is being performed on the TRSTA1Lx (connected over a LAN), it may take the OPOS control at least 2 minutes to recover automatically after the connection is recovered. Power the printer off and on again in order to make the OPOS control recover within 2 minutes. However, please remember that the attribute information (e.g. data or fonts) that was sent before the error will be reset after the power-off and on of the printer.

21) LAN printer model

In case of using the LAN model, use it after changing setting of the firmware for UPOS.(About the setting method, refer to a manual of the firmware of the TRST-A1x LAN model.)

No existing LAN printer model supports dual side printing. In addition, the LAN printer model supports only the standard code page, but not DBCS (Double Byte Character Set).

2.1.4 CheckHealth Method Specifications

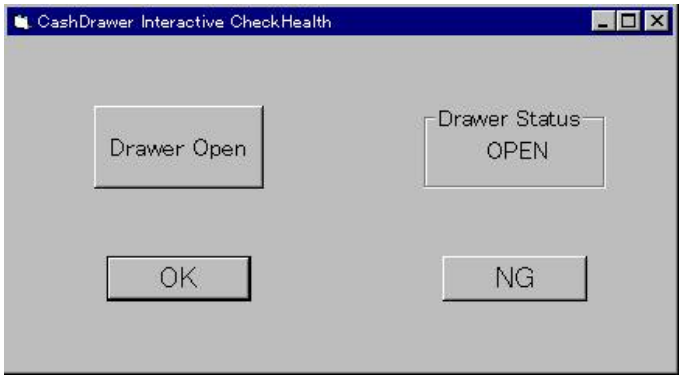
1) Internal Level (OPOS_CH_INTERNAL)
This only checks a drawer open/close status.
The drawer open/close status is set in the CheckHealthText property.

Value (ResultCode)	CheckHealthText	Meaning
OPOS_SUCCESS	"Internal HCheck: Opend!!"	Drawer open
	"Internal HCheck: Closed!!"	Drawer close
OPOS_E_ NOTCLAIMED	"HCheck: Exclusive"	Exclusive error
OPOS_E_DISABLED	"HCheck: Disabled"	Disabled

2) External Level (OPOS_CH_EXTERNAL)
This checks a drawer status by opening a drawer. When the drawer is open, the status completes successfully, and when it is closed, the status completes abnormally.

Value (ResultCode)	CheckHealthText	Meaning
OPOS_SUCCESS	"External HCheck: Successful"	Opened
OPOS_E_FAILURE	"External HCheck: Error"	Not opened
OPOS_E_NOTCLAIMED	"HCheck: Exclusive"	Exclusive error
OPOS_E_DISABLED	"HCheck: Disabled"	Disabled

3) Interactive Level (OPOS_CH_INTERACTIVE)
This displays the following dialog box. Clicking the "Drawer Open" button checks if the drawer opens. After performing a visual check, click on the "OK" or "NG" button to determine the result.



Value (ResultCode)	CheckHealthText	Meaning
OPOS_SUCCESS	"Interactive HCheck: Successful"	Completed with the OK button clicked
OPOS_E_FAILURE	"Interactive HCheck: Error"	Completed with the NG button clicked
OPOS_E_NOTCLAIMED	"HCheck: Exclusive"	Exclusive error
OPOS_E_DISABLED	"HCheck: Disabled"	Disabled

HKEY_LOCAL_MACHINE\SOFTWARE\OLEforRetail\ServiceOPOS\CashDrawer\DRWA1L

General	"TEC.DRWA1.L"
Service	"C:\OPOS\TEC\DRWA1L.DLL"
Description	"TEC TRSTA1L's CashDrawer"
Version	"1.8"
DebugLogFile	"C:\OPOS\TEC\LOG\DRWA1L.LOG"
DebugLogLevel	"0" | "1" | "2" | "3"
IPAddress **(*1) (*2)**	"xxx.xxx.xxx.xxx"
TCPPort**(*1) (*2)**	"0" –
UDPPort**(*1) (*2)**	"0" –
PrinterPhysicalName**(*1)**	"TRSTA1L1" – "TRSTA1L3"

(*1) Only for the LAN devices

(*2) If the printer OPOS specified for **PrinterPhysicalName** is installed, the cash drawer will operate in accordance with the printer registry.

Table 36 DRWA1L CashDrawer Control – Registries

Service	Filename of Service Object
Description	Brief explanation of Service Object
Version	Version number of Service Object
DebugLogFile	Specifies a log file with path which records OPOS operations. If a folder does not exist, no log is kept.
DebugLogLevel	Specifies a level for recording a log in a file specified by DebugLogFile. 0: Log is not output. 1: Level where a log is recorded mainly at a time of error 2: Level where OPOS operations can be traced using a log. 3: Level where OPOS operations are debugged
Port **(*1)**	Name of communication port Can be set from the Control Panel.
BaudRate **(*2)** VendorID **(*3)**	Communication speed Can be set from the Control Panel. Should be consistent with the baud rate setting of the device. Vendor ID of the USB device
ProductID **(*3)**	Product ID of the USB device
IPAddress**(*4)**	IP address of the LAN printer used in this registry setting (IPv4 or Internet Protocol Version 4), which is represented in dot-decimal notation (four numbers, each ranging from 0 to 255, separated by dots). The IP address is not omissible. If a specific OPOS physical device name is specified for PrinterPhysicalName, a higher priority will be given to the use of the IP address specified in the registry of the appropriate printer. Can be set from the Control Panel.
TCPPort**(*4)**	Port number used in TCP/IP communication. TCPPort

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

	will default to "9100" if no value is specified or if anything other than a numeric value is specified. The value specified here must be the same as the one specified in the printer configuration. If a specific OPOS physical device name is specified for PrinterPhysicalName, a higher priority will be given to the use of the IP address specified in the registry of the appropriate printer.
UDPPort(*4)	Port number used in UDP/IP communication. UDPPort will default to "3000" if no value is specified or if anything other than a numeric value is specified. The value specified here must be the same as the one specified in the printer configuration. If a specific OPOS physical device name is specified for PrinterPhysicalName, a higher priority will be given to the use of the IP address specified in the registry of the appropriate printer.
PrinterPhysicalName(*4)	Specifies the OPOS physical device name of the printer (e.g. "TRSTA1L1") that the drawer defined in this configuration information is connected to. If no name is specified or if the specified physical device name cannot be found, the specified IPAddress, TCPPort, and UDPPort will take effect.

(*1) Used by the DRWA1S/DRWA1P
(*2) Used by the DRWA1S
(*3) Used by the DRWA1U
(*4) Used by the DRWA1L

2.1.7 Limitations and Precautions

1) Relationship with the TRST-A1x printers
   This Control is an OPOS control which controls the drawer devices connected to a drawer port of the TRST-A10/TRST-A15 printer device. This Control does not control the drawers which are directly connected to a POS system.

2) Hydra functions
   Both this Control and the TRSTA1x POS Printer Control use the TRST-A10 and TRST-A15 printer devices and the same port (COM port, LPT port, or USB port). Using the Hydra function, two or more OPOS controls can use the same port, but the same port cannot be controlled at an exact timing by two or more OPOS controls. For this reason, a drawer control cannot be performed during printing or printing cannot be performed at the moment when the drawer control is being performed. Especially because it takes time to print or register bitmaps on the printer, the application should control processes in a manner so that printing or registration of bitmap and drawer control will not occur at the same time, avoiding the drawer control from waiting to be performed.

4. Control Panel

This chapter describes the Control Panel which is installed by the installer.
For the setup details, please refer to the section, "1.1.7 OPOS Registry".

4.1 Overview

You can easily make the common registry settings for the TRSTA1x POS Printer OPOS Control by installing the OPOS in an execution environment.
Available settings are as follows:

<table>
<tr><th>Value</th><th>Description</th></tr>
<tr><td>PrinterType</td><td>This item is used only in Control Panel.
The Control Panel sets minimum setting of each printer model based on a specified value collectively. This item recommends that I set it to a used printer model.
PrinterType will default to "TRST-A1x-QM" if no value is specified or if anything other than a numeric value is specified.
"TRST-A1x-QM"
"TRST-A1x-CN"
"TRST-A0x"
Registry is changed automatically as follows by setting this item in Control Panel.
<table>
<tr><th>PrinterType</th><th>FontSize</th><th>ProductID(*5)</th></tr>
<tr><td>TRST-A1x-QM</td><td>Not change</td><td>61</td></tr>
<tr><td>TRST-A1x-CN</td><td>Not change</td><td>70</td></tr>
<tr><td>TRST-A0x</td><td>FontSize2</td><td>82</td></tr>
</table>
</td></tr>
<tr><td>Port</td><td>A port, used to connect with the printer device, can be selected from the list box.</td></tr>
<tr><td>IPAddress(*3)</td><td>IP address assigned to the printer device (IPv4 or Internet Protocol Version 4), which is represented in dot-decimal notation (four numbers, each ranging from 0 to 255, separated by dots).</td></tr>
<tr><td>TCPPort(*3)</td><td>Port number used in TCP/IP communication. The value specified here should be the same as the one specified in the printer configuration.</td></tr>
<tr><td>UDPPort(*3)</td><td>Port number used in UDP/IP communication. The value specified here should be the same as the one specified in the printer configuration.</td></tr>
<tr><td>BaudRate

Country</td><td>A communication speed with the printer can be selected from the list box. The value should be the same as the baud rate setting of the printer device.
A country code can be selected from the list box.</td></tr>
<tr><td>Paper Width</td><td>Printer paper width can be selected either from 80 mm or 58 mm.
The value should be the same as the paper width setting of the printer device.</td></tr>
<tr><td>Use Override Mode</td><td>An operational mode of the RotatePrint method can be set to Override mode by checking this checkbox.</td></tr>
<tr><td>DBCSMode (*2)</td><td>When "Korea" is selected for Country, a selection, whether or not the printer commands only used for DBCS (Double Byte Character Set) are to be used, can be made.
The value should be the same as the DBCSMode setting of the printer device.</td></tr>
</table>

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

	This setting is ignored when a country other than "Korea" is selected for Country.
Print Mode **(*1)**	A default print mode when using the OPOS can be selected from the front side mode (printing only on the front side) and the three back side print modes (printing only on the back side).
Swap Front Side and Back Side **(*1)**	A print side (front or back side) can be switched by checking this checkbox.
Upside Down **(*1)** Minimum Receipt **(*1)**	Upside Down Print on the front/back side is enabled by checking this checkbox A minimum receipt length for printing in Transaction1 mode can be specified in dots.
FontSize	Font size setting FontSize1 or FontSize2 are selectable. Should be consistent with the paper width setting of the device. (For details, refer to the section "Limitations and Precautions" in this chapter.)
FontType	Font type setting FontA or FontB are selectable. Specifies a font type to be typically used on the application. (For details, refer to the section "Limitations and Precautions" in this chapter.)

(*1) These values can be set using the printer device setting, but the OPOS Control ignores the printer device settings and enables the settings made from the Control Panel.

(*2) For these values, the same value should be set for the printer device and the OPOS Control Panel.

(*3) Used specifically for the LAN device

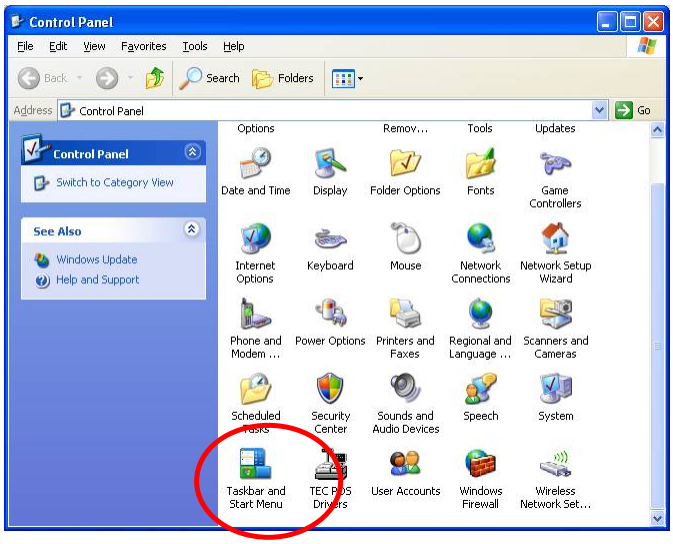
(*4) The ProductID setting is performed only at the time of setting of the USB.

Table 38 TRSTA1x POS Printer Control – Available Settings from Control Panel

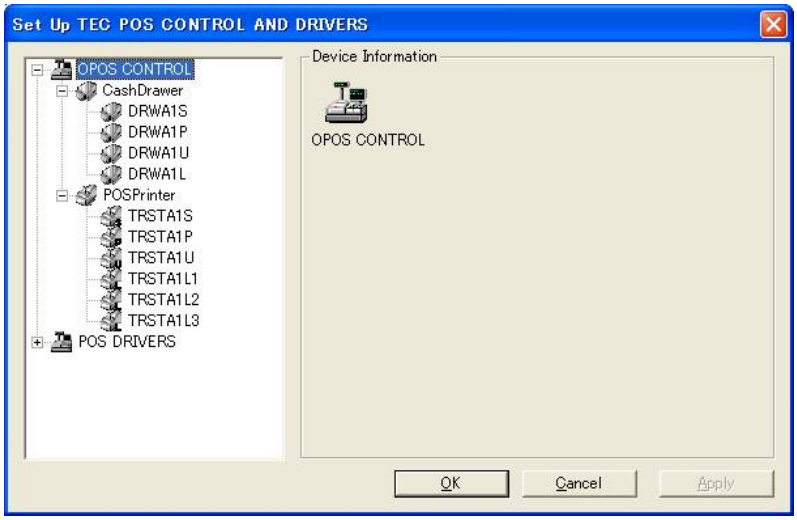
TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

4.2 Startup and Operations

In order to make settings from the "Control Panel", open the "Control Panel" screen and double-click the "TEC POS Drivers" icon.



As shown below, the "Set Up TEC OPOS CONTROL AND DRIVERS" screen appears.
Under the "OPOS CONTROL" icon, device names are listed by device classes. Double-click a device name to make necessary settings.



TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

For the TRSTA1x POS Printer Control, the following screen appears. Items which should not be set or unsupported items are grayed out.

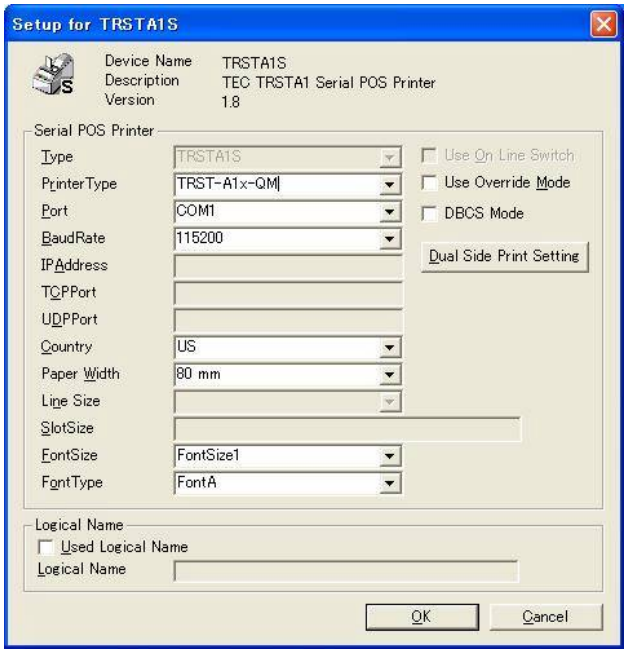


Table 39 TRSTA1S (Serial POS Printer) Setup Screen

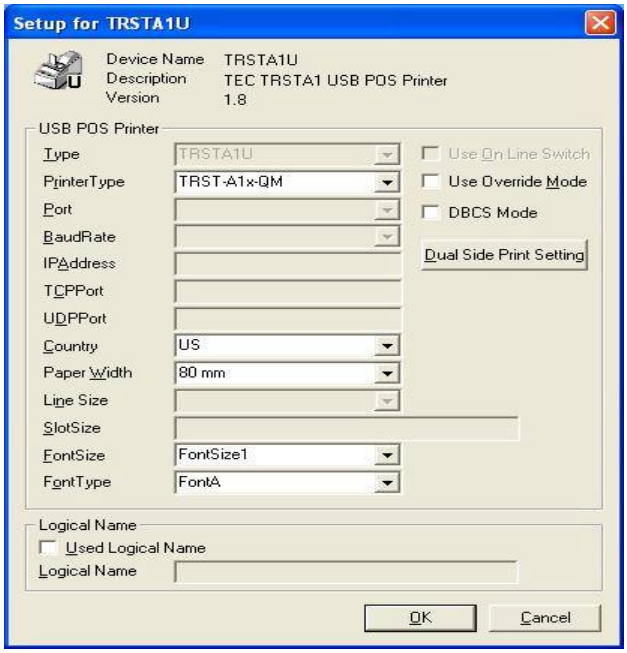

Table 40 TRSTA1U(USB POS Printer) Setup Screen

In order to make Dual Side Print settings to the TRSTA15 (Dual Side Printer), press the "Dual Side Print Setting" button, and the "Dual Side Print Setting" screen appears. Please make settings using this screen only when you want to fix the settings such as print mode. If you want to dynamically change the print mode using the program or when the Dual Side Print functions of the TransactionPrint method is used, it is recommended to leave the settings to the defaults.

4.3 DBCS (Double Byte Character Set) – Setting to Print Chinese/Korean

For printing Chinese Code Page 54936 and Korean Code Page 949, necessary settings should be made to the OPOS Control Panel in accordance with the printer configuration settings of the printer model used.

Korean Code Page 949

The TRST-A1x-xx-QM-R supports the Korean Code Page 949. Please follow the procedure described below to print Korean characters.

1. Select "DBCS:VALID/Font:Size1" for "Set DBCS & Font Size" of the printer configuration.
2. Select "VALID" or "INVALID" for "SET Printer Mode ANK to DBCS?" of the printer configuration.
3. In accordance with the printer configuration settings above and the table below, select Country and DBCSMode for the OPOS.

Printer Configuration	Printer Configuration Value	OPOS Country	OPOS DBCS Mode
Software Options Set DBCS & Font Size	DBCS:VALID/Font:Size1	Korea	0 (without check)
Software Options SET Printer Mode ANK to DBCS?	VALID		

Printer Configuration	Printer Configuration Value	OPOS Country	OPOS DBCS Mode
Software Options Set DBCS & Font Size	DBCS:VALID/Font:Size1	Korea	1 (with check)
Software Options SET Printer Mode ANK to DBCS?	INVALID		

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

Chinese Code Page 54936

The TRST-A1x-xx-CN-R supports the Chinese Code Page 54936. Please select "TRST-A1x-CN" for PrinterType" of the OPOS Control to print Chinese characters.

5. Installer

This Chapter describes the installer for installing the TRSTA1x OPOS Control.

5.1 Procedure

1) Installation of Toshiba TEC's general-purpose USB driver (for the USB POS printer only)
When you connect the TRST-A10/TRST-A15 USB POS Printer, Windows displays the screen asking you to install the USB driver.
Install the USB driver by selecting the USBdriver folder and following the standard Windows procedures.
When the installation completes successfully, "Toshiba TEC TRST-A1x USB POS-Printer" appears under "TEC Bulk & Interrupt USB Device" in the Computer Management screen as shown below.

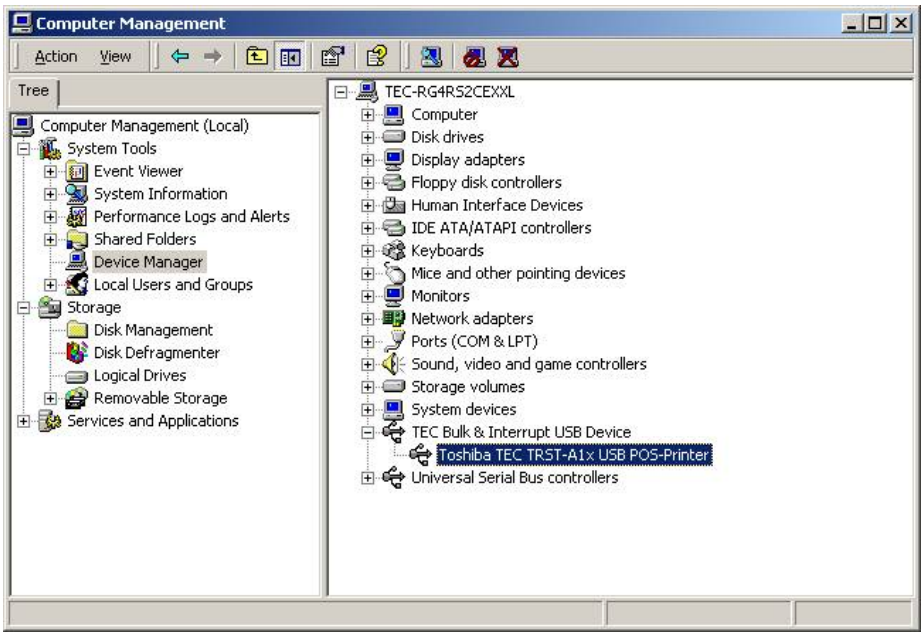

Table 48 Windows Device Manager after Installing the USB Driver

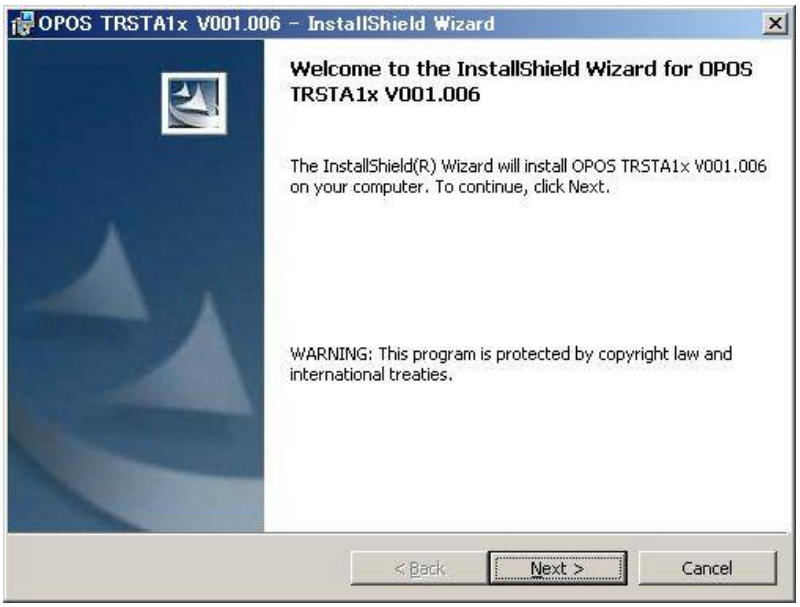
Depending on the printer configuration setting, the USB driver may not be installed successfully. In such a case, please make sure the printer configuration setting for "USB Type" is as follows.

"USB Type" of "Communication Interface" = "Vendor Spec, Class"

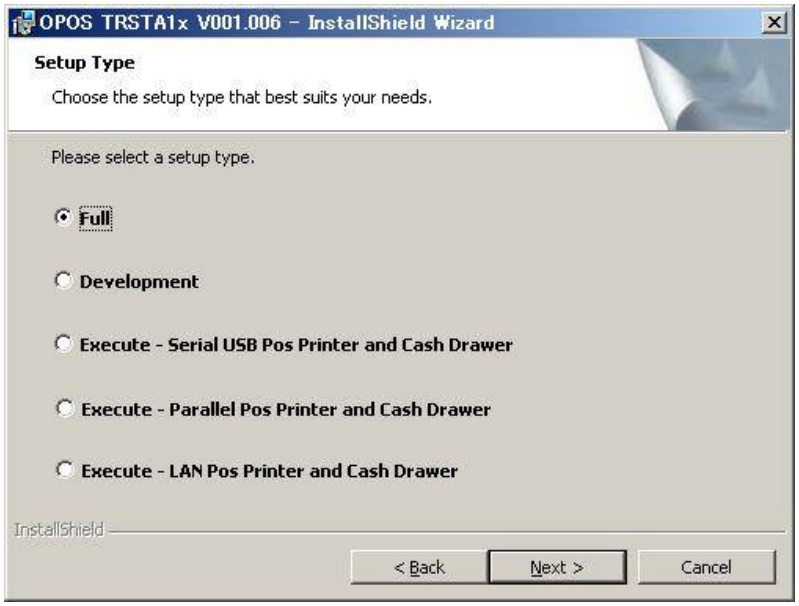
TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

2) Installation of OPOS Control

Run the Setup.exe file in the OPOS folder, and the following screen appears. Read the description on the screen and press the Next button.



The Setup Type screen appears. Select a setup type.



TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

Setup type	Description	Installation File

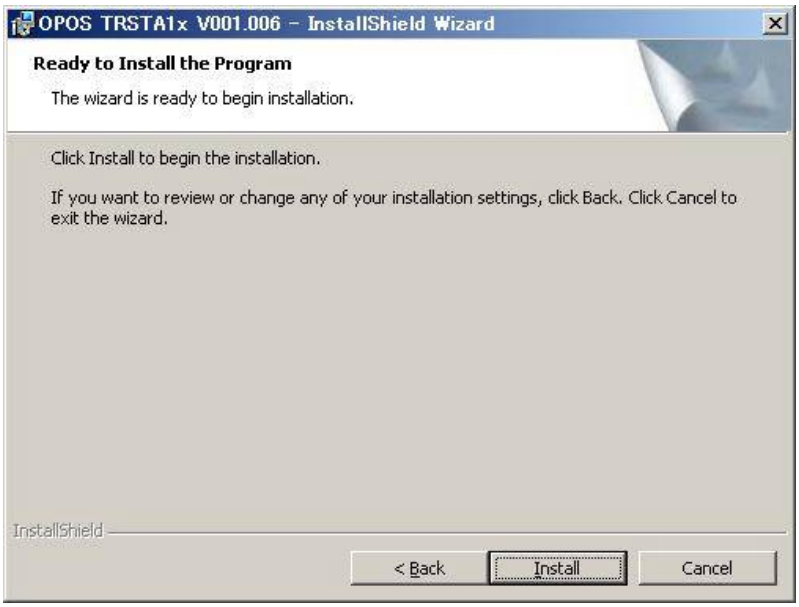
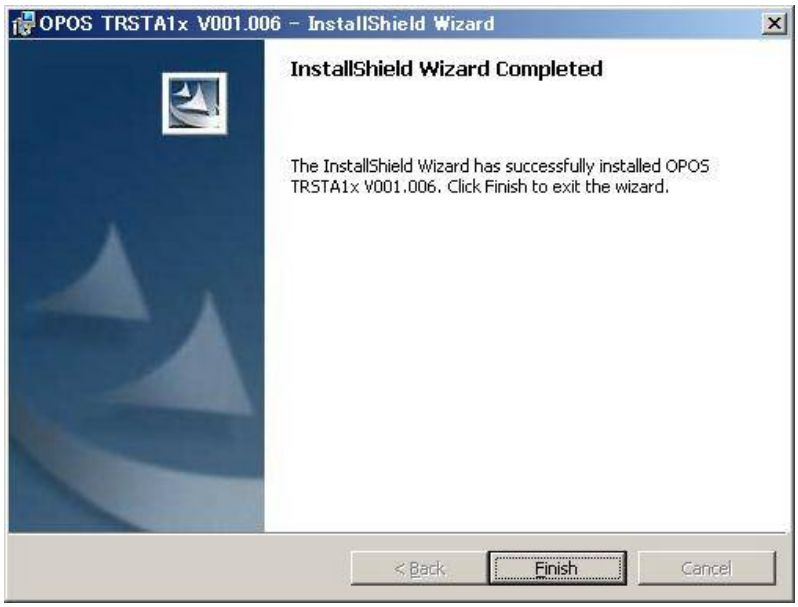
Table 49 Setup Types of OPOS Control Installer

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

After selecting a setup type, press the Install button to start the installation.



When the installation completes successfully, the following screen appears.



TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

6. Tool

This chapter describes the tools which are installed by the installer.

6.1 Bitmap Registration to Flash ROM (SetBitmapTool)

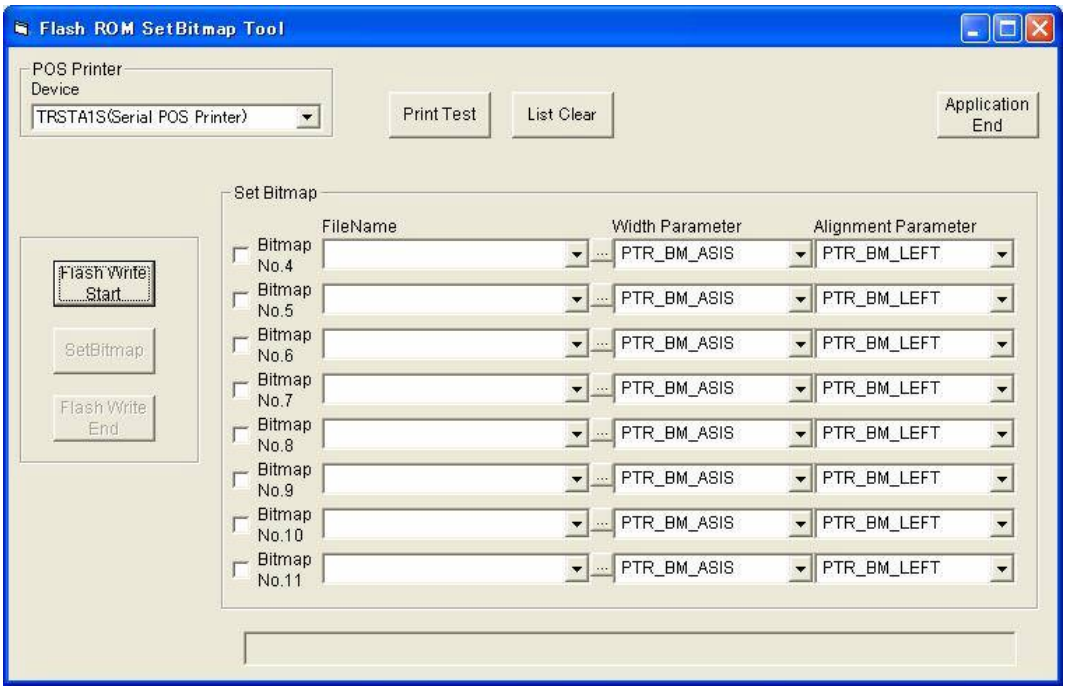
This tool saves a bitmap image file in the flash ROM of the printer device. The written bitmap image will not disappear even when the printer power is turned off and can be used without calling the SetBitmap method when the power is turned on again.
Bitmap images written into the flash ROM using this tool can be printed using the OPOS's bitmap print escape sequence [ESC|#B].

6.1.1 Operation Environment

This tool works as the application of the OPOS Control in the environment where the TRSTA1x POS Printer OPOS Control works.

6.1.2 Setup and Operations

Double-click the "SetBitmap.exe" file in the default folder, "C:\OPOS\TEC\TEST", and the following screen appears.



1. Select a device name of the POS printer connected.
2. Clicking the Flash Write Start button starts preparing to write a bitmap into the flash ROM of a specified POS printer, erasing all bitmaps stored in it.
3. Select a value of FileName, Width Parameter, and Alignment Parameter for each bitmap number. Width Parameter sets the horizontal width of a bitmap in dots which automatically reduces or enlarges a bitmap. When "ASIS" is selected, no reduction or enlargement is performed (same size as the bit map file).
   A numeric character entered in the Alignment Parameter box indicates the number of dots from the left edge of receipt paper.
   Only the bitmaps in black and white can be specified by FileName.
4. Clicking the SetBitmap button disables the Flash Write End button and all bitmaps of the bitmap number

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

checked are saved in the flash ROM.

5. When all selected bitmaps are saved, the SetBitmap button is disabled and the Flash Write End button is enabled.
6. Clicking the Flash Write End button disables bitmap registration to the flash ROM, and ends the process.

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

6.2 Operation Check (CheckHealth Program)

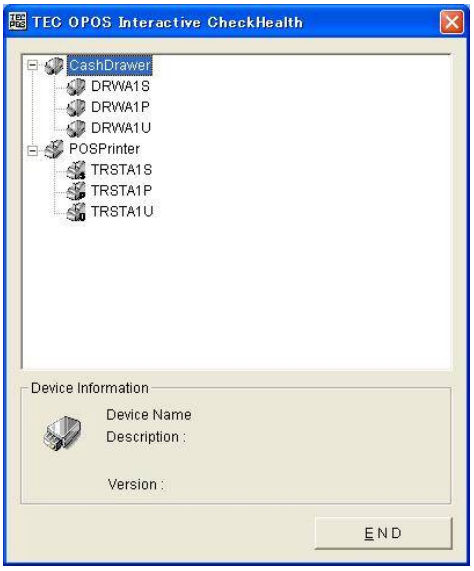
This program (OPOSCHK.exe) checks that each installation or each setting has been successfully completed, so that the device can operate properly after the installation or settings from the Control Panel. Running the OPOSCHK.exe file calls an interactive mode of the OPOS CheckHealth method.

6.2.1 Operation Environment

This tool works as the application of the OPOS Control in the environment where the TRSTA1x POS Printer OPOS Control works.

6.2.2 Setup and Operation

Double-click the "OPOSCHK.exe" file in the default folder, "C:\OPOS\TEC\TEST", and the following screen appears.
Names of the devices being installed are listed under the device class icon. Double-clicking a device you want to check will show the CheckHealth screen for that device.



For the details of the CheckHealth screen and the operation method, please refer to the section, "1.1.4 CheckHealth Method Specifications".

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

7. Appendix A Error Code List

The OPOS Control notifies the user of a result when the method is executed and a property setting is performed. The following pages give you error code lists, their meanings, and error handling method in case an error occurs.

This Control returns values below as error codes.

ResultCode	Value
OPOS_SUCCESS	0
OPOS_E_CLOSED	101
OPOS_E_CLAIMED	102
OPOS_E_NOTCLAIMED	103
OPOS_E_NOSERVICE	104
OPOS_E_DISABLED	105
OPOS_E_ILLEGAL	106
OPOS_E_NOHARDWARE	107
OPOS_E_OFFLINE	108
OPOS_E_NOEXIST	109
OPOS_E_FAILURE	111
OPOS_E_TIMEOUT	112
OPOS_E_BUSY	113
OPOS_E_EXTENDED	114

ResultCodeExtended	Value
OPOS_EPTR_COVER_OPEN	201
OPOS_EPTR_JRN_EMPTY	202
OPOS_EPTR_REC_EMPTY	203
OPOS_EPTR_REC_EMPTY	204
OPOS_EPTR_TOOBIG	206
OPOS_EPTR_BADFORMAT	207

OpenResult	Value
OPOS_ORS_CONFIG	403
OPOS_ORS_BADCO	451
OPOS_ORS_RESOURCEFAIL	452
OPOS_ORS_ALREADYOPEN	453

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

1) Open Method

Notifies a result using a return value and OpenResult property. One of the values is placed in the ResultCode: OPOS_SUCCESS when the method completed successfully, the same value as the current if the device has been already opened, then OPOS_E_CLOSED for other cases.

Method	Value	OpenResult	Meaning	Error Handling
Open	OPOS_SUCCESS	OPOS_SUCCESS	Completed successfully	–
	OPOS_E_NOSERVICE	OPOS_ORS_BADCO	CO is not supporting the required method.	Need investigation.
		OPOS_ORS_RESOURCEFAIL	Failed to obtain the OS version.	Need investigation.
	OPOS_E_ILLEGAL	OPOS_ORS_ALREADYOPEN	Already opened.	–
	OPOS_E_NOEXIST	OPOS_ORS_CONFIG	Incorrect registry	Need investigation.
	OPOS_E_FAILURE	OPOS_ORS_RESOURCEFAIL	Internal abnormality Failed to create system resource.	Restart the POS system. Need investigation if the same error repeats.

2) Close Method

Notifies a result using a return value and Result Code property.

Method	Value	ResultCode	Meaning	Error Handling
Close/CloseService	OPOS_SUCCESS	OPOS_E_CLOSED	Completed successfully	–
	OPOS_E_CLOSED	OPOS_E_CLOSED	Already closed.	–
	Value returned from Release/ReleaseDevice	ResultCode for Release/ReleaseDevice	Refer to the section, "Release/ReleaseDevice".	–

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

3) DirectIO Method

The DirectIO method is described for each command.

There are two types of commands: those that only operate synchronously and those that operate both synchronously and asynchronously. Regarding the latter commands, a notification method differs between when they operate synchronously and when they operate asynchronously. This document describes for both cases.

Commands that operate both synchronously and asynchronously are as follows:

TPTR_CMD_DIRECT_OUTPUT
TPTR_CMD_SET_PTRREQUEST
TPTR_CMD_FILE_OUTPUT
TPTR_CMD_PRINTBITMAP

- When the commands operate synchronously:

  The table below describes the synchronous operations for the both types of commands.

  Each method notifies a result using a return value, Result Code property, and ResultCodeExtended property.

Command	Value ResultCode	ResultCodeExtended	Meaning	Error Handling
TPTR_CMD_DIRECT_ OUTPUT	OPOS_SUCCESS	0	Completed successfully	–
	OPOS_E_CLOSED	0	The device is closed.	Open the device using the Open method.
	OPOS_E_NOTCLAIMED	0	Does not have exclusive access to the device.	Obtain the exclusive access using the Claim (ClaimDevice) method.
	OPOS_E_DISABLED	0	The device is disabled.	Set the DeviceEnabled property to TRUE to enable the device.

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

Command	Value ResultCode	ResultCodeExtended	Meaning	Error Handling
TPTR_CMD_DIRECT_ OUTPUT	OPOS_E_ILLEGAL	0	Illegal value	Check the parameter value.
			Failed to create system resource. (Failed to secure the memory area.)	Restart the POS system. Need investigation if the same error repeats.
	OPOS_E_NOHARDWARE	0	The printer power is not turned on or printer is not connected.	Check the printer power is turned on and the connection with the printer has been established. Need investigation if there are no problems with the power and connection statuses.
	OPOS_E_FAILURE	0	Failed due to the reason other than Cover Open and No Paper.	Check none of the following abnormalities exist. Need investigation if any such abnormality exists. • Paper jam • Cutter error
	OPOS_E_BUSY	0	An asynchronous printing is in process.	Execute this method again after the asynchronous printing is completed.
	OPOS_E_EXTENDED	OPOS_EPTR_COVER_OPEN	Cover Open (The printer cover is open.)	Execute this method again after closing the printer cover.
		OPOS_EPTR_REC_EMPTY	No Paper (The receipt paper has run out.)	Execute this method again after loading a new receipt paper.
TPTR_CMD_FILE_ OUTPUT	OPOS_SUCCESS	0	Completed successfully	–
	OPOS_E_CLOSED	0	The device is closed.	Open the device using the Open method.
	OPOS_E_NOTCLAIMED	0	Does not have exclusive access to the device.	Obtain the exclusive access using the Claim (ClaimDevice) method.

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

Command	Value ResultCode	ResultCodeExtended	Meaning	Error Handling
TPTR_CMD_FILE_ OUTPUT	OPOS_E_DISABLED	0	The device is disabled.	Set the DeviceEnabled property to TRUE to enable the device.
	OPOS_E_NOEXIST	0	The file does not exist.	Specify a correct filename.
	OPOS_E_ILLEGAL	0	Illegal value	Check the parameter value.
			Failed to create system resource. (Failed to secure the memory area.)	Restart the POS system. Need investigation if the same error repeats.
	OPOS_E_NOHARDWARE	0	The printer power is not turned on or printer is not connected.	Check the printer power is turned on and the connection with the printer has been established. Need investigation if there are no problems with the power and connection statuses.
	OPOS_E_FAILURE	0	Failed due to the reason other than Cover Open and No Paper.	Check none of the following abnormalities exist. Need investigation if any such abnormality exists. • Paper jam • Cutter error
	OPOS_E_BUSY	0	An asynchronous printing is in process.	Execute this method again after the asynchronous printing is completed.
	OPOS_E_EXTENDED	OPOS_EPTR_COVER_ OPEN	Cover Open (The printer cover is open.)	Execute this method again after closing the printer cover.
		OPOS_EPTR_REC_EMPTY	No Paper (The receipt paper has run out.)	Execute this method again after loading a new receipt paper.

- When the commands operate asynchronously:
  The table below describes the asynchronous operations of the commands that can operate both synchronously and asynchronously.
  Each command notifies a result of process reservation using a return value and ResultCode property, and ResultCodeExtended property and a result of the process using the following events: OutputCompleteEvent when the process completed successfully and ErrorEvent when the process failed.
  The ResultCode and ResultCodeExtended parameters indicate the reason of failure.

Command	Value ResultCode	ResultCodeExtended	Meaning	Error Handling
TPTR_CMD_DIRECT_ OUTPUT (Result of process reservation)	OPOS_SUCCESS	0	Process reservation accepted	–
	OPOS_E_CLOSED	0	The device is closed.	Open the device using the Open method.

4) Special Methods

There are two types of methods: those that only operate synchronously and those that operate both synchronously and asynchronously. Regarding the latter methods, a notification method differs between when they operate synchronously and when they operate asynchronously. This document describes for both cases.

Methods that operate both synchronously and asynchronously are as follows:

PrintNormal method
PrintTwoNormal method
CutPaper method
RotatePrint method
PrintBarCode method
PrintBitmap method
TransactionPrint method
MarkFeed method

- When the methods operate synchronously:

  The table below describes the synchronous operations for the both types of methods.

  Each method notifies a result using a return value, Result Code property, and ResultCodeExtended property.

Method	Value ResultCode	ResultCodeExtended	Meaning	Error Handling
PrintNormal	OPOS_SUCCESS OPOS_E_CLOSED	0 0	Completed successfully The device is closed.	– Open the device using the Open method.
	OPOS_E_NOTCLAIMED	0	Does not have exclusive access to the device.	Obtain the exclusive access using the Claim (ClaimDevice) method.

- When the methods operate asynchronously:
  The table below describes the asynchronous operations of the methods that can operate both synchronously and asynchronously. Each method notifies a result of process reservation using a return value and ResultCode property and ResultCodeExtended property and a result of the process using the following events: OutputCompleteEvent when the process completed successfully and ErrorEvent when the process failed. The ResultCode and ResultCodeExtended parameters indicate the reason of failure.

Method	Value ResultCode	ResultCodeExtended	Meaning	Error Handling

9. Appendix C Port Common Manager/Driver

9.1 Registry

The port common manager / driver contains the following configuration information:

(1) LAN interface

HKEY_LOCAL_MACHINE\SYSTEM\TEC\POS DRIVERS\TECSLANMgr

DebugLogLevel	"0" | "1" | "2"
DebugLogFile	"C:\TEC\OPOS\LOG\TECSLANMgr.LOG"

HKEY_LOCAL_MACHINE\SYSTEM\TEC\TECShareLAN

DebugLogLevel	"0" | "1" | "2"
DebugLogFile	"C:\TEC\OPOS\LOG\TECShareLAN.LOG"
MaxWaitTime	"0" –

(2) USB interface

HKEY_LOCAL_MACHINE\SYSTEM\TEC\POS DRIVERS\TECSUSBMgr

DebugLogLevel	"0" | "1" | "2"
DebugLogFile	"C:\TEC\OPOS\LOG\TECSUSBMgr.LOG"

HKEY_LOCAL_MACHINE\SYSTEM\TEC\TECShareUSB

DebugLogLevel	"0" | "1" | "2"
DebugLogFile	"C:\TEC\OPOS\LOG\TECShareUSB.LOG"
MaxWaitTime	"0" –

(3) RS-232C interface

HKEY_LOCAL_MACHINE\SYSTEM\TEC\POS DRIVERS \TECSSerialMgr

DebugLogLevel	"0" | "1" | "2"
DebugLogFile	"C:\TEC\OPOS\LOG\ TECSSerialMgr.LOG"

HKEY_LOCAL_MACHINE\SYSTEM\TEC\TECShareSerial

DebugLogLevel	"0" | "1" | "2"
DebugLogFile	"C:\TEC\OPOS\LOG\ TECShareSerial.LOG"
MaxWaitTime	"0" –

TOSHIBA TEC CORPORATION TOSHIBA TEC CORPORATION Copyright (C) 2007-2009

(4) Parallel interface

HKEY_LOCAL_MACHINE\SYSTEM\TEC\POS DRIVERS\TECSParallelMgr

DebugLogLevel	"0" | "1" | "2"
DebugLogFile	"C:\TEC\OPOS\LOG\ TECSParallelMgr.LOG"

HKEY_LOCAL_MACHINE\SYSTEM\TEC\TECShareParallel

DebugLogLevel	"0" | "1" | "2"
DebugLogFile	"C:\TEC\OPOS\LOG\ TECShareParallel.LOG"
MaxWaitTime	"0" –

(5) Description

DebugLogLevel	Specifies a log level when keeping a log of the OPOS execution result in the file specified for DebugLogFile. "0" : No log output "1": Level that permits the logging mainly when an error occurs "2": Level that ensures traceability of the OPOS operation Log output affects the performance of the application. Therefore, specify "0" unless log output is really necessary.
DebugLogFile	Specifies a log file in which the execution result of OPOS is logged and a path to the log file. The result will not be logged without the folder.
MaxWaitTime	Specifies maximum waiting time in the unit of msec until a function performed on the printer is completed. MaxWaitTime will default to "60000" if no value is specified or if anything other than a numeric value is specified. The value is determined depending on the communication traffic volume and the line quality. If an inappropriate value is specified, the Hydra system will not function properly. Therefore, please specify an appropriate value if the current value needs to be changed.
